# 1. Overview

The enhanced conventional PD200 dispatching system is a DMR enhanced conventional dispatching system self-developed by Caltta. The PD200 can realize multifunctional command & dispatch services through access of the repeater PR900 and corresponding DMR radios, build communication network for users, and provide users with great convenience and assistance in PTT communication.

The enhanced conventional PD200 dispatching system adopts C/S architecture and modular design, and is composed of functional modules such as voice dispatch, positioning, short message, and report generation. It is realized based on the standard SIP protocol.

It consists of dispatching client, dispatching server, gateway, repeater, mobile and portable radios.

Figure 1-1 Sample diagram of DMR enhanced conventional networking

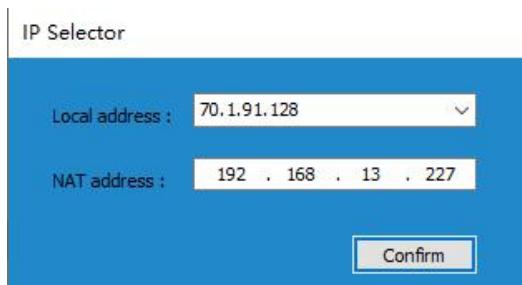

## 2. System

### 2.1. Log in System

First, you need to start the server on the server computer, click to run the server software PD200Server on the desktop. The IP selection window pops up as follows.

Select the correct IP address from "Local IP Address" drop-down box, which is used as the server IP address. Fill in "NAT Address" with the mapping IP address during private network traversal (if there is no private network traversal, keep default setting), click "OK" and the server enters background running state.

Figure 2-1 IP selection before login

 Step 1 Double-click  on desktop or in the installation directory, and login dialog will be shown as follows.

Figure 2-2 Login interface

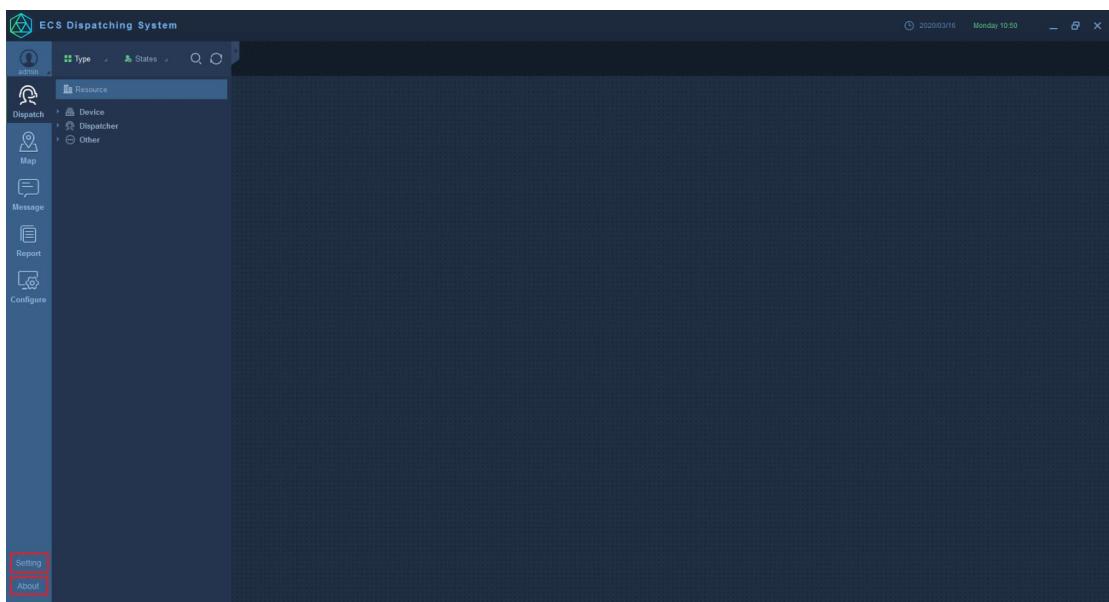

**Step 2** Enter username, password (default password 111111) and server IP address, click "Login".

## 2.2. System Parameters Configuration

### 2.2.1. Storage Path Configuration

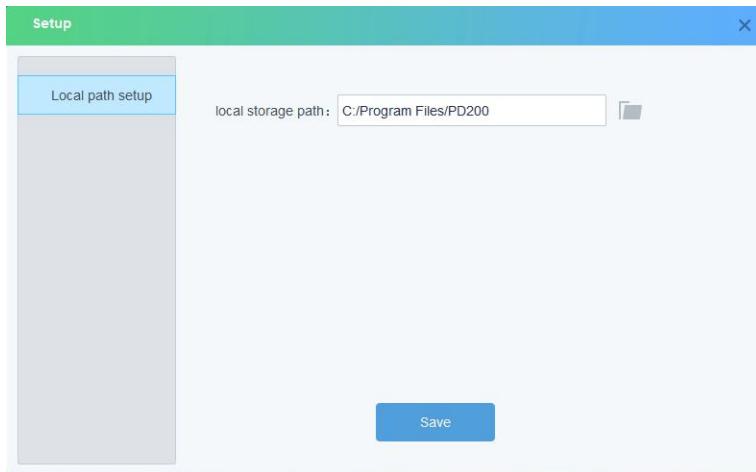

After logging in to the dispatcher client, click "Setting" on the bottom-left corner.

Figure 2-3 Dispatcher main interface

You can change the storage path for files saved by clients. This path is used to save client logs, alarm information, recording files, base station tracing logs, and so on.

Figure 2-4 Modify storage path

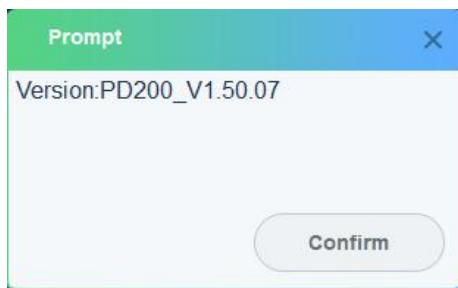

### 2.3. About the System

After logging in to the dispatcher client, click "About" on the bottom-left corner.

You can view system brief introduction, system version and copyright information, click "OK" to exit.

Figure 2-5 View system information

## 2.4. Log out System

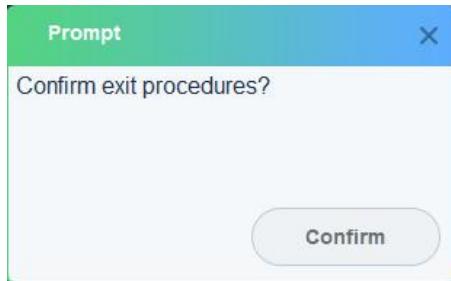

When you do not need to use the system, you can log out the system by clicking the "Close" button in the upper right corner of the interface.

Figure 2-6 Click "Close" to logout

Click "Confirm" on the pop-up page to exit the system.

Figure 2-7 Prompt before logout

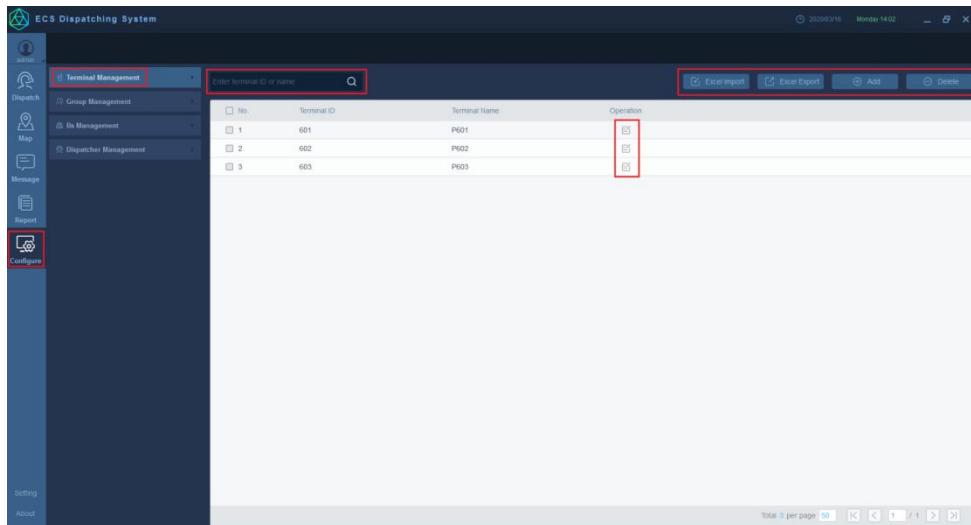

## 3. Configure

### 3.1. Terminal Management

"Terminal Management" is mainly used to manage terminal numbers in the dispatching system, which is convenient for the dispatcher to dispatch terminals.

"Terminal Management" contains 6 functions: add terminal, edit terminal, delete terminal, batch import / export terminals, search terminal ID / name.

Figure 3-1 Terminal management interface

### 3.1.1. Add Terminal

The terminal ID range is [1,16775903]. The newly added terminal ID is not allowed to be duplicated with existed terminal ID, and it must be consistent with parameters configured by CPS. The terminal name cannot exceed 16 characters, which can be numbers, letters, symbols, and Chinese characters, and the name is not allowed to be empty.

Figure 3-2 Add terminal

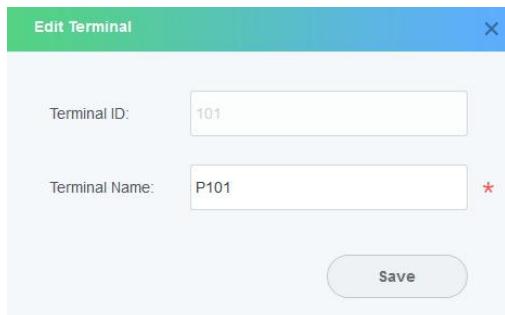

### 3.1.2. Edit Terminal

The terminal name can be edited and submitted, which cannot exceed 16 characters (can be numbers, letters, symbols, and Chinese characters), and is not allowed to be empty.

Figure 3-3 Edit terminal - 1

No.	Terminal ID	Terminal Name	Operation
1	P101		
2	P102		
3	P103		

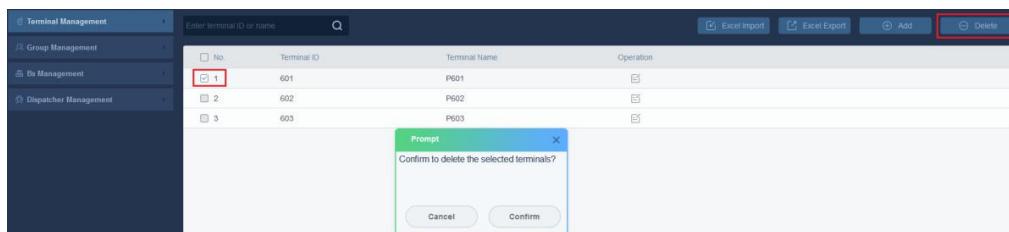

Figure 3-4 Edit terminal - 2

### 3.1.3. Delete Terminal

Select the terminal you want to delete, select the checkbox in front, and click "Delete" button at the top-right corner. Click "Confirm" on the pop-up page to delete the terminal, otherwise click "Cancel".

Figure 3-5 Delete terminal

### 3.1.4. Batch Export Terminals

The "Excel Export" function can export all allocated terminal numbers to an Excel file for easy backup and subsequent use.

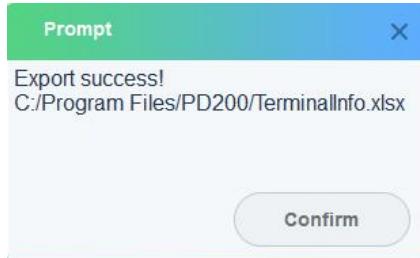

On "Terminal Management" page, click "Excel Export", and a dialog box will pop up. Set the path and file name, and click "Save" to save successfully.

Figure 3-6 Batch export terminals

The following dialog box will pop up after successful export.

Figure 3-7 Prompt after export success

### 3.1.5. Batch Import Terminals

The "Excel Import" function can help you import user number data saved on your local computer, such as a user number file that has been exported as a backup previously.

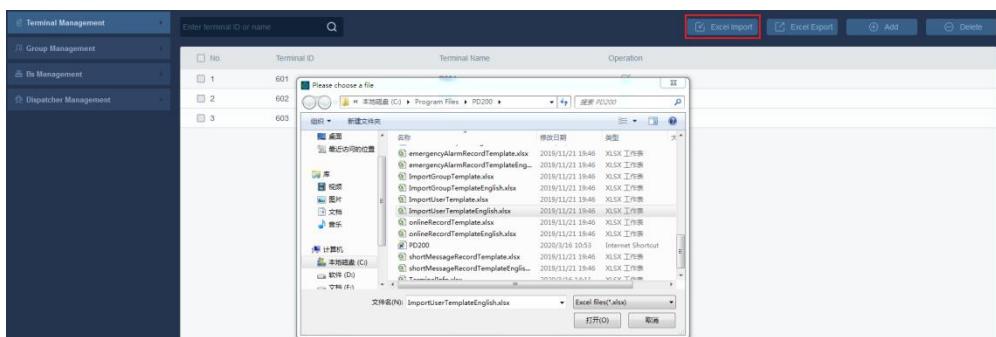

The user number Excel sheet contains two lines of information: "Terminal ID" and "Terminal Name". You can add / modify "Terminal ID" and "Terminal Name" as you need.

Figure 3-8 Excel file for batch import terminals

Terminal ID	Terminal Name
201	P201
202	P202
203	P203
204	P204
205	P205
206	P206
207	P207
208	P208
209	P209
210	P210

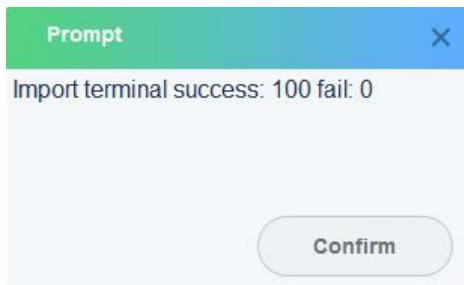

Select "Excel Import", the following page will pop up, you can choose the file to import.

Figure 3-9 Batch import terminals

After the import is complete, the number of succeeded and failed imported terminals will be displayed.

Figure 3-10 Prompt after import success

### 3.1.6. Search Terminal

Enter the ID or name of the terminal to search. Fuzzy search is supported.

Figure 3-11 Search terminal

The search results are displayed based on search criteria:

Figure 3-12 Search results containing "60"

No.	Terminal ID	Terminal Name	Operation
1	260	P260	
2	601	P601	
3	602	P602	
4	603	P603	

Figure 3-13 Search results containing "Security"

No.	Terminal ID	Terminal Name	Operation
1	301	Security_301	
2	302	Security_302	
3	303	Security_303	
4	304	Security_304	

## 3.2. Group Management

"Group Management" contains 6 functions: add group, edit group, delete group, batch import / export groups, search group ID / name.

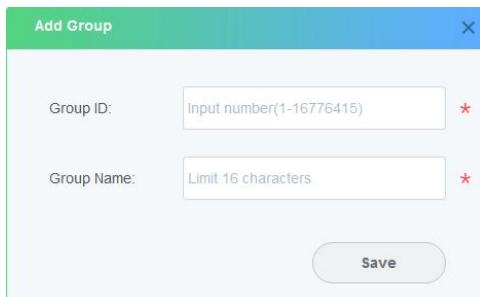

Figure 3-14 Group management interface

No.	Group ID	Group Name	Operator
1	G651		
2	G652		
3	G653		

### 3.2.1. Add Group

The group ID range is [1,16776415]. The newly added group ID is not allowed to be duplicated with existed group ID. The terminal name cannot exceed 16 characters, which can be numbers, letters, symbols, and Chinese characters, and the name is not allowed to be empty.

Figure 3-15 Add group

### 3.2.2. Edit Group

The group name can be edited and submitted, which cannot exceed 16 characters (can be numbers, letters, symbols, and Chinese characters), and is not allowed to be empty.

Figure 3-16 Edit group - 1

No.	Group ID	Group Name	Operation
1	651	G651	
2	652	G652	
3	653	G653	

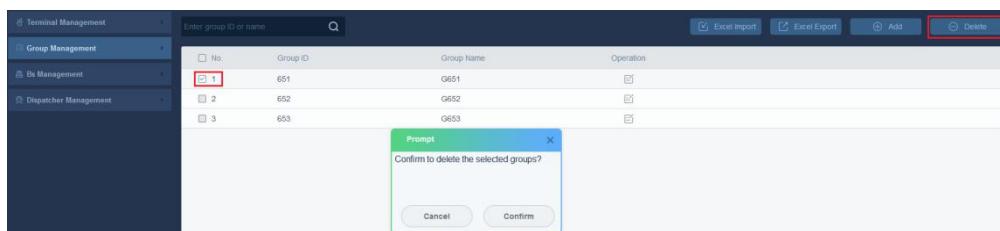

Figure 3-17 Edit group - 2

A screenshot of a modal dialog titled 'Edit Group'. It contains two input fields: 'Group ID:' with value '652' and 'Group Name:' with value 'G652' and a red asterisk. Below the inputs is a 'Save' button.

### 3.2.3. Delete Group

Select the group you want to delete, select the checkbox in front, and click "Delete" button at the top-right corner. Click "Confirm" on the pop-up page to delete the group, otherwise click "Cancel".

Figure 3-18 Delete group

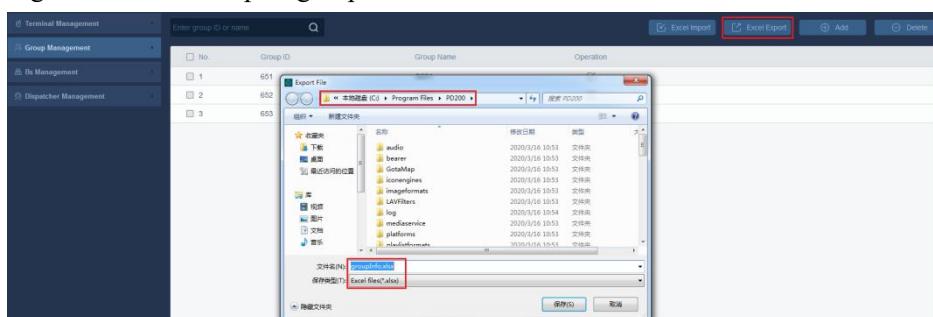

### 3.2.4. Batch Export Groups

The "Excel Export" function can export all allocated group numbers to an Excel file for easy backup and subsequent use.

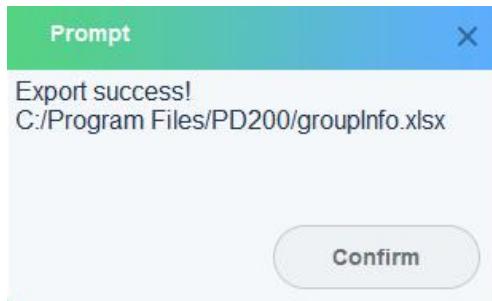

On "Group Management" page, click "Excel Export", and a dialog box will pop up. Set the path and file name, and click "Save" to save successfully.

Figure 3-19 Batch export groups

The following dialog box will pop up after successful export.

Figure 3-20 Prompt after export success

### 3.2.5. Batch Import Groups

The "Excel Import" function can help you import group number data saved on your local computer, such as a group number file that has been exported as a backup previously.

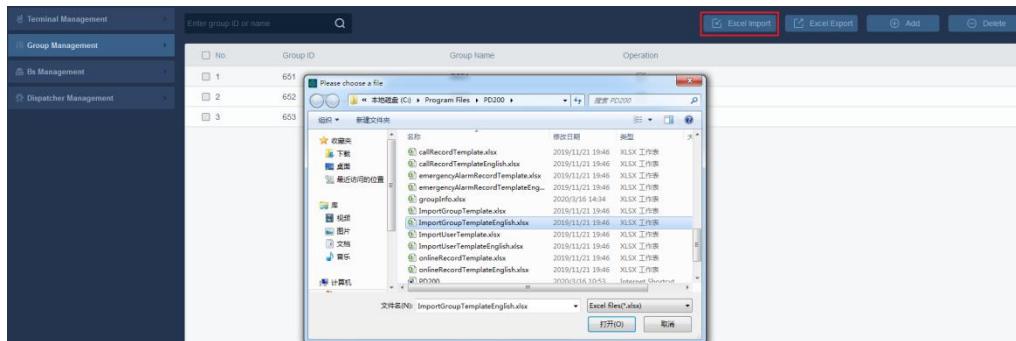

The group number Excel sheet contains two lines of information: "Group ID" and "Group Name". You can add / modify "Group ID" and "Group Name" as you need.

Figure 3-21 Excel file for batch import groups

	A	B
1	Group ID	Group Name
2	900	Security_900
3	901	Security_901
4	902	Security_902
5	903	Security_903
6	904	Security_904
7	905	Security_905
8	906	Security_906
9	907	Security_907
10	908	Security_908
11	909	Security_909
12	910	Security_910

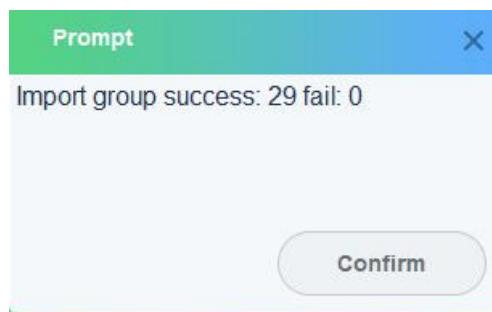

Select "Excel Import", the following page will pop up, you can choose the file to import.

Figure 3-22 Batch import groups

After the import is complete, the number of succeeded and failed imported groups will be displayed.

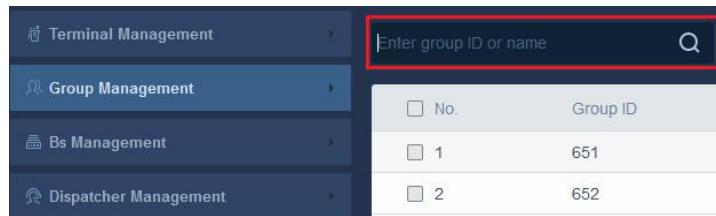

Figure 3-23 Prompt after import success

### 3.2.6. Search Group

Enter the ID or name of the group to search. Fuzzy search is supported.

Figure 3-24 Search group

The search results are displayed based on search criteria:

Figure 3-25 Search results containg "65"

No.	Group ID	Group Name	Operation
1	650	G650	edit
2	651	G651	edit
3	652	G652	edit
4	653	G653	edit

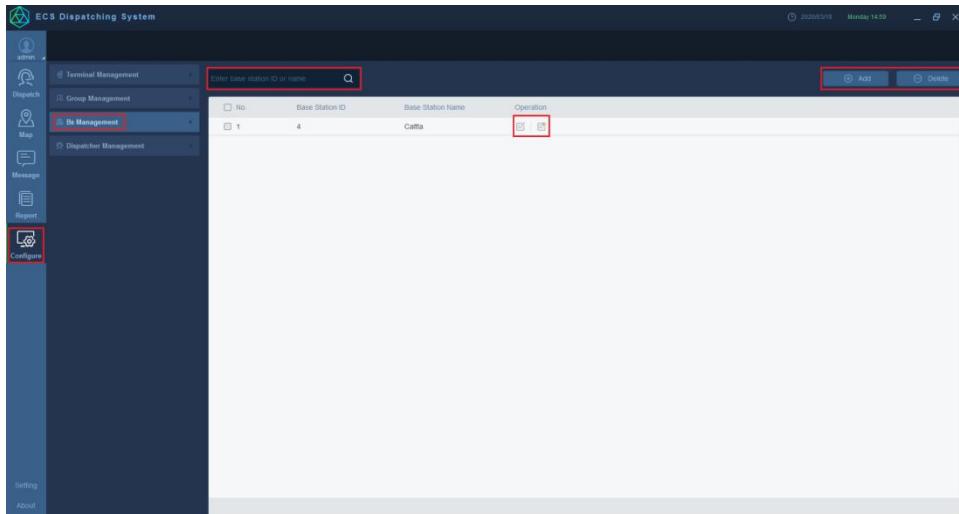

Figure 3-26 Search results containg "Security"

No.	Group ID	Group Name	Operation
1	900	Security_900	
2	901	Security_901	
3	902	Security_902	
4	903	Security_903	
5	904	Security_904	
6	905	Security_905	
7	906	Security_906	

### 3.3. BS (Base Station) Management

"BS Management" contains 5 functions: add base station, view base station, edit base station, delete base station, search base station ID / name.

Figure 3-27 BS management interface

#### 3.3.1. Add Base Station

The base station ID range is [1,16775903]. The newly added base station ID is not allowed to be duplicated with existed base station ID. The base station name cannot exceed 16 characters, which can be numbers, letters, symbols, and Chinese characters, and the name is not allowed to be empty. The base station password can contain the following characters: (0-9, a-z, A-Z, ~!@#\$%^\*).

The base station ID is allocated during CPS configuration.

Figure 3-28 Base Station ID configuration via CPS

Basic Setting

Site Name	Site 1
BS ID	4
Board ID	1
Master	<input type="checkbox"/>
Site Type	Single Site
Tx Power[W]	1
Rx Base Frequency[MHz]	400.000000
Tx Base Frequency[MHz]	410.000000

The base station password is configured during CPS configuration, which is used to connect to the dispatching server.

Figure 3-29 Base station password configuration via CPS

AIS

AIS	<input checked="" type="checkbox"/>
Service IP	70 . 1 . 91 . 128
Password	111111
Service Port	19888
Voice Service Port(Slot 1)	30000
Voice Service Port(Slot 2)	30001
RTP Voice Packet Buffering Length	4
Heartbeat Interval[s]	10
Periodic Registration Interval[s]	3600

When adding a new base station, the base station ID and password must be consistent with CPS configuration, so that the base station can establish link with dispatcher server successfully.

Figure 3-30 Configure base station basic information

The screenshot shows the 'Add Base Station' interface. It has two tabs at the top: 'Basic Information' (selected) and 'Available Group'. The 'Basic Information' tab contains four input fields with validation rules:

- Base Station ID: Input number(1-16775903) \*
- Base Station Name: Limit 16 characters \*
- PassWord: Input characters(0-9、a-z、A-Z、~!@#\$%^\*) \*
- Confirm PassWord: Input characters(0-9、a-z、A-Z、~!@#\$%^\*) \*

A 'Save' button is located at the bottom right.

After entering parameters of the new base station, click "Save",

Select "Add Available Group", to add groups that belong to the base station, and click "Save".

Figure 3-31 Add base station with available group - 1

The screenshot shows the 'Add Available Group' interface, which is part of the 'Add Base Station' process. It has two tabs at the top: 'Basic Information' (disabled) and 'Available Group' (selected). The 'Available Group' tab has a 'Delete' button. Below the tabs is a table header with columns: No., Group ID, and Group Name. A red box highlights the 'Add Available Group' button, which has a plus sign icon.

No.	Group ID	Group Name
1	651	G651
2	652	G652
3	653	G653

Figure 3-32 Add base station with available group - 2

The screenshot shows the 'Edit Bs' interface, which is part of the 'Add Base Station' process. It has two tabs at the top: 'Basic Information' (disabled) and 'Available Group' (selected). The 'Available Group' tab has a 'Delete' button. Below the tabs is a table header with columns: No., Group ID, and Group Name. A red box highlights the 'Add Available Group' button, which has a plus sign icon.

No.	Group ID	Group Name
1	651	G651
2	652	G652
3	653	G653

### 3.3.2. View Base Station

After adding the base station successfully, you can click  to view the information of the base station.

Figure 3-33 View base station basic information

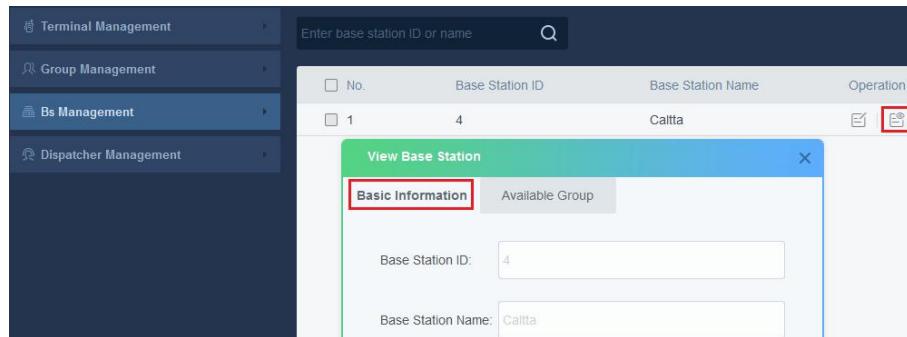

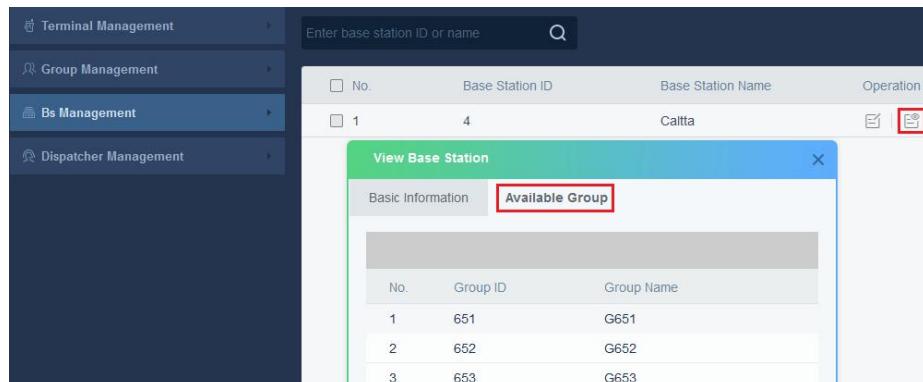

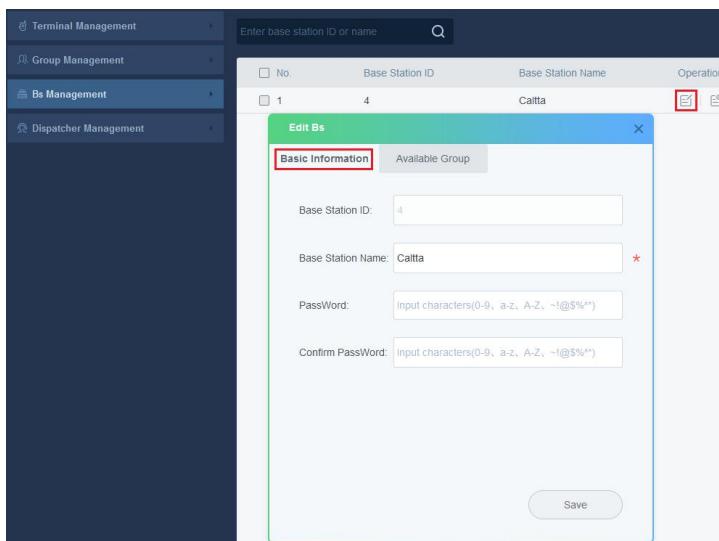

Figure 3-34 View base station's available group

### 3.3.3. Edit Base Station

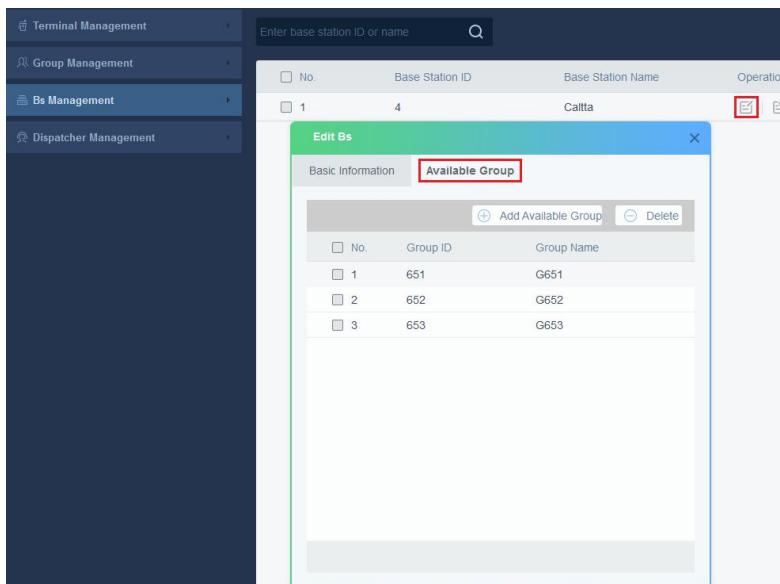

You can click  to edit the name and password of the base station.

Figure 3-35 Edit base station basic information

You can also edit the "Available Group" of the base station.

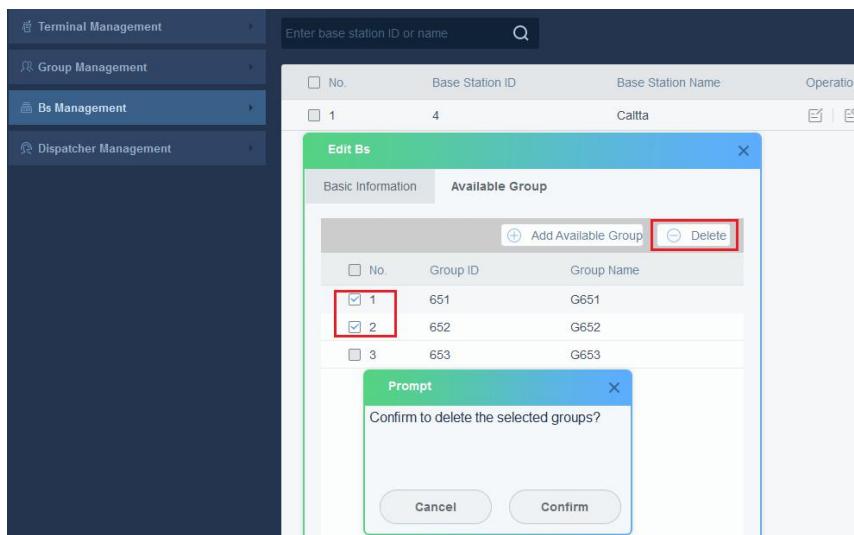

Figure 3-36 Edit base station's available group

You can perform deletion operation on the "Available Group" of the base station:

Select the group you want to delete, and click "Delete" button at the top-right corner. Click "Confirm" on the pop-up page to delete the group, otherwise click "Cancel".

Figure 3-37 Delete available group from base station

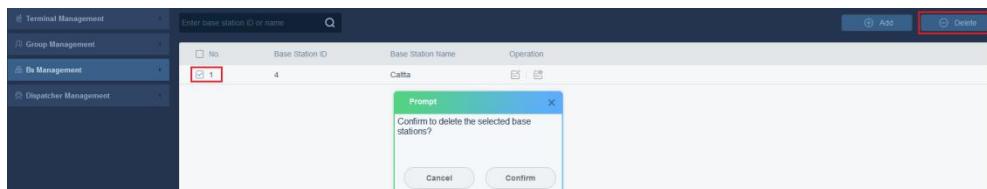

After the deletion is successful, the group no longer belongs to this base station and cannot be dispatched under this base station.

### 3.3.4. Delete Base Station

Select the base station you want to delete, select the checkbox in front, and click "Delete" button at the top-right corner. Click "Confirm" on the pop-up page to delete the base station, otherwise click "Cancel".

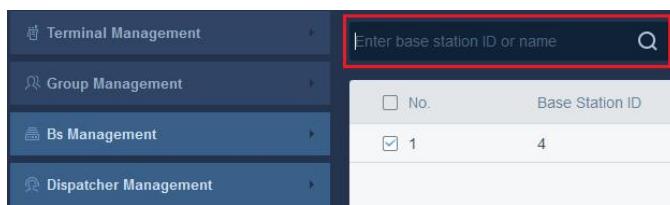

Figure 3-38 Delete base station

### 3.3.5. Search Base Station

Enter the ID or name of the base station to search. Fuzzy search is supported.

Figure 3-39 Search base station

The search results are displayed based on search criteria:

Figure 3-40 Search results containg "4"

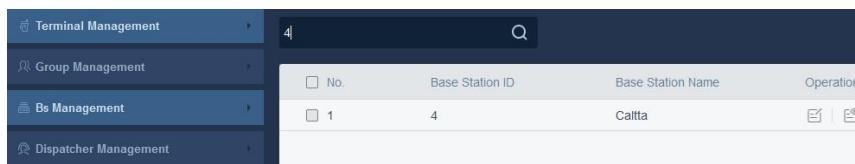

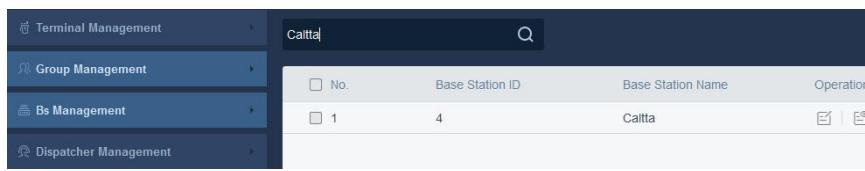

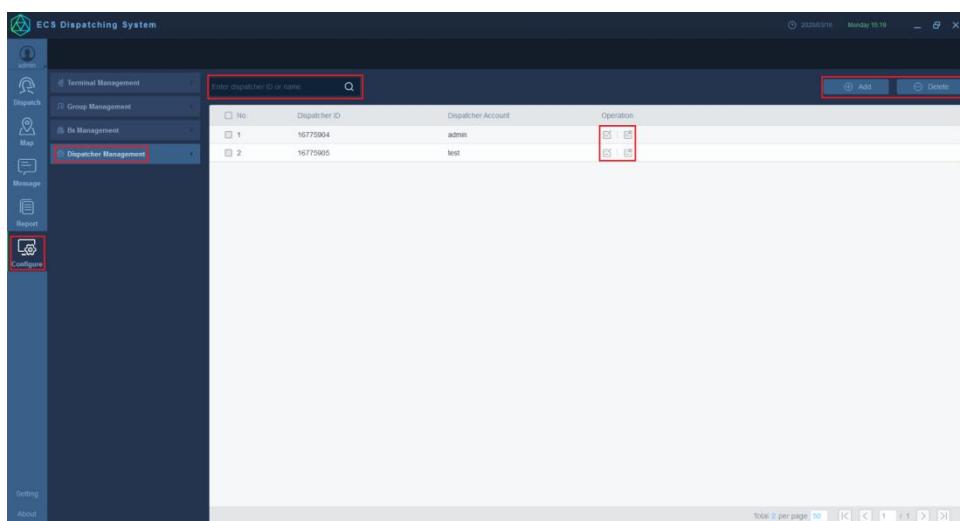

Figure 3-41 Search results containg "Caltta"

### 3.4. Dispatcher Management

"Dispatcher Management" contains 5 functions: add dispatcher, view dispatcher, edit dispatcher, delete dispatcher, search dispatcher ID / name.

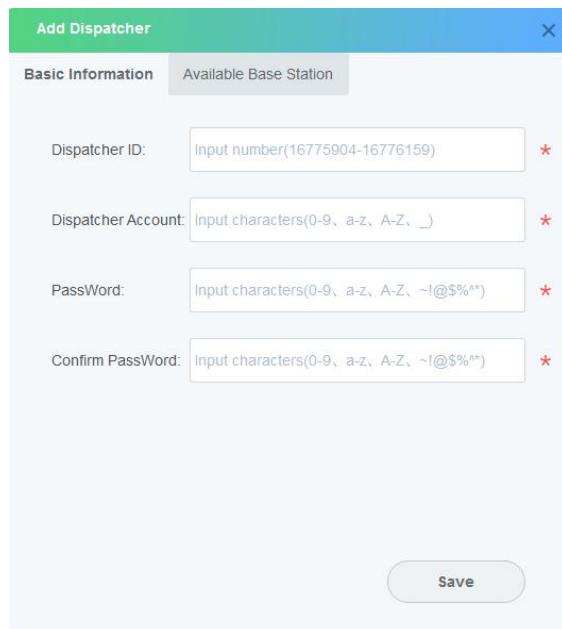

Figure 3-42 Dispatcher management interface

### 3.4.1. Add Dispatcher

The dispatcher ID range is [16775904,16776159]. The newly added dispatcher ID is not allowed to be duplicated with existed dispatcher ID. The dispatcher account cannot exceed 16 characters, which can contain the following characters: (0-9, a-z, A-Z, \_, Chinese characters), and the name is not allowed to be empty. The dispatcher password can contain the following characters: (0-9, a-z, A-Z, ~!@#\$%^\*).

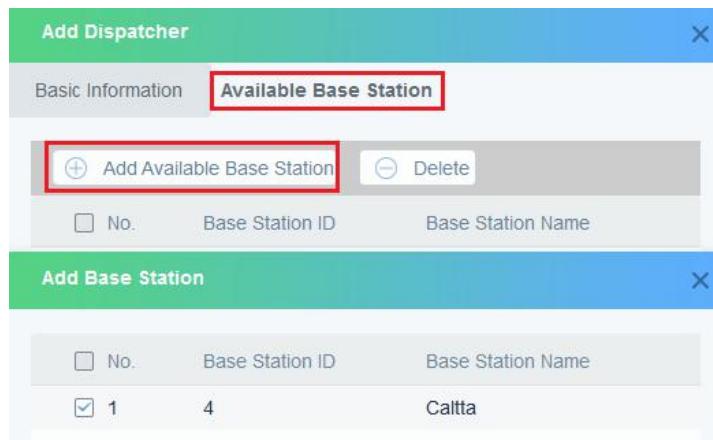

Figure 3-43 Add dispatcher basic information

After entering parameters of the new dispatcher, click "Save".

Select "Add Available Base Station" on "Available Base Station" page, to add available base station, and click "Save". Now the dispatcher can perform PTT, positioning, and other dispatching services on the groups and users under the base station.

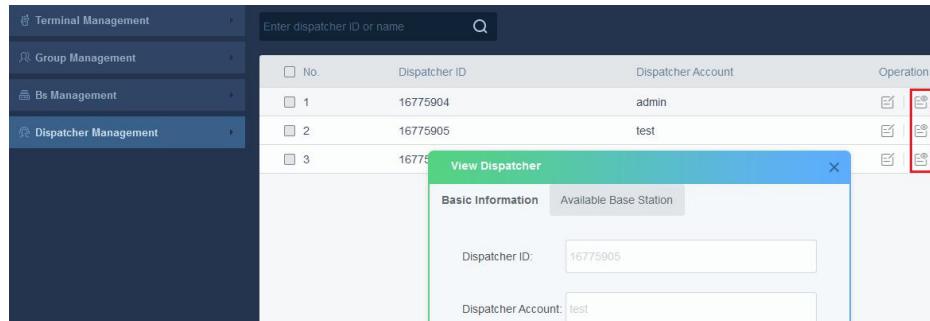

Figure 3-44 Add dispatcher with available base station

### 3.4.2. View Dispatcher

After adding the dispatcher successfully, you can click to view the information of the dispatcher.

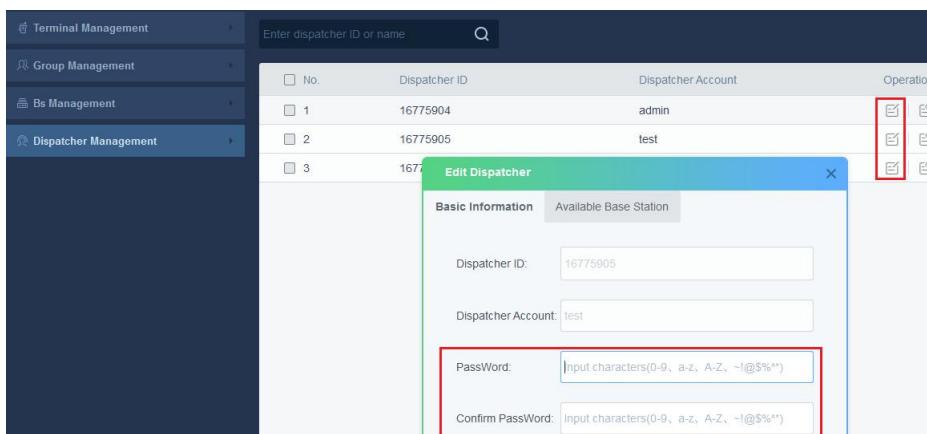

Figure 3-45 View Dispatcher

### 3.4.3. Edit Dispatcher

You can click to edit the password of the dispatcher.

Figure 3-46 Edit dispatcher basic information

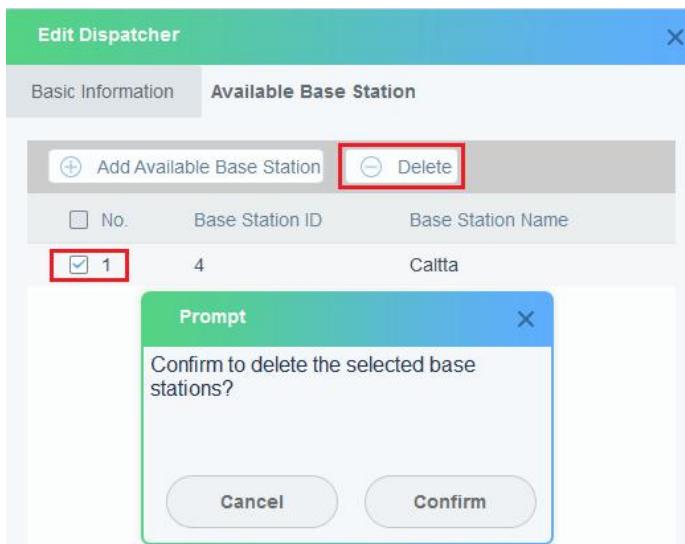

You can also edit the "Available Base Station" of the dispatcher.

You can perform deletion operation on the "Available Base Station" of the dispatcher:

Select the base station you want to delete, and click "Delete" button. Click "Confirm" on the pop-up page to delete the base station, otherwise click "Cancel".

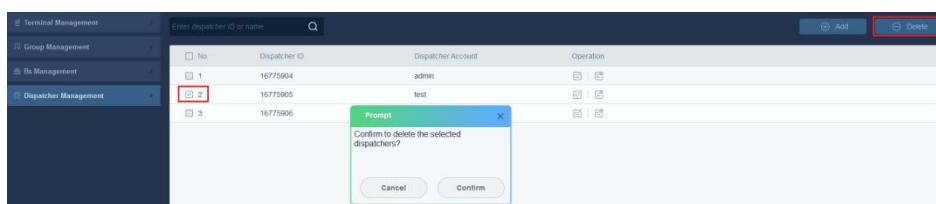

Figure 3-47 Delete dispatcher's available base station

#### 3.4.4. Delete Dispatcher

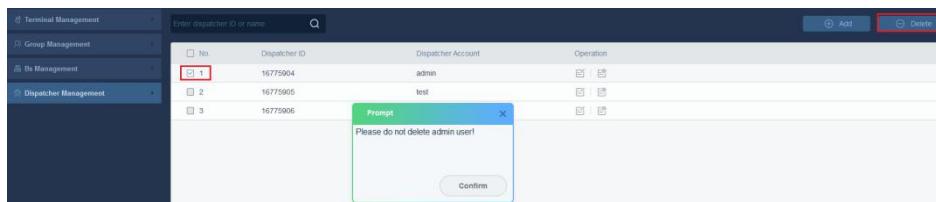

Select the dispatcher you want to delete, select the checkbox in front, and click "Delete" button at the top-right corner. Click "Confirm" on the pop-up page to delete the dispatcher, otherwise click "Cancel".

Figure 3-48 Delete dispatcher

Note: Dispatcher account "admin" cannot be deleted.

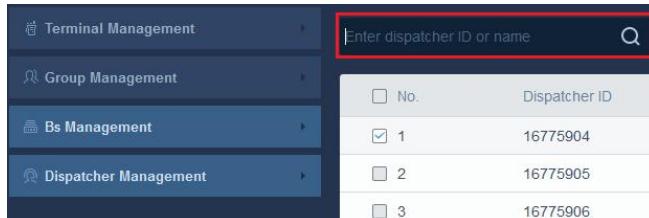

Figure 3-49 Delete "admin" failure prompt

### 3.4.5. Search Dispatcher

Enter the ID or name of the dispatcher to search. Fuzzy search is supported.

Figure 3-50 Search dispatcher

The search results are displayed based on search criteria:

Figure 3-51 Search results containing "906"

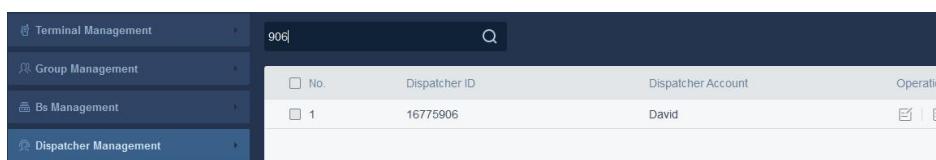

Figure 3-52 Search results containing "test"

No.	Dispatcher ID	Dispatcher Account	Operation
1	16775905	test	

## 4. Dispatch

The "Dispatch" module provides you with various voice dispatching services such as private call, group call, all call, and dispatcher interworking. The system automatically records the call content during a call, you can check the call log in the "Report" module and replay it.

### 4.1. Interface Introduction

The main function of dispatch is displayed on the interface, which is convenient for you to use. The main dispatching interface and interface elements are shown as follows.

Figure 4-1 Dispatch management interface

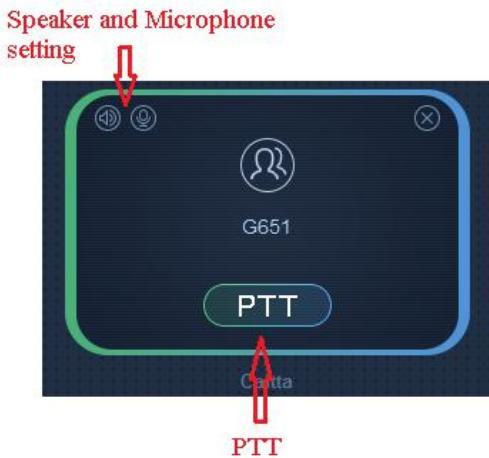

Table 4-1 "Dispatch" interface explanation

No.	Name	No.	Name
1	Main Menu	4	Call Bar
2	Resource List	5	Call Panel
3	Dispatch Area		

#### 4.1.1. Call Panel

The call panel helps you make call and apply for speaking rights.

Figure 4-2 Call panel interface

#### 4.1.2. Resource List

The "Resource" list covers all the resources you can access currently. The list contains the following elements:

Figure 4-3 "Resource" list interface

Table 4-2 "Resource" list interface explanation

No.	Name	No.	Name
1	Search	5	States Filter

2	Refresh	6	Device List
3	Show details	7	Dispatcher List
4	Type Filter	8	Other List

#### 4.1.3. Voice Control

The sound control is located in the upper left corner of the call panel, and you can set the call to mute state.

Speaker normal mode

Microphone normal mode

Speaker mute mode

Microphone mute mode

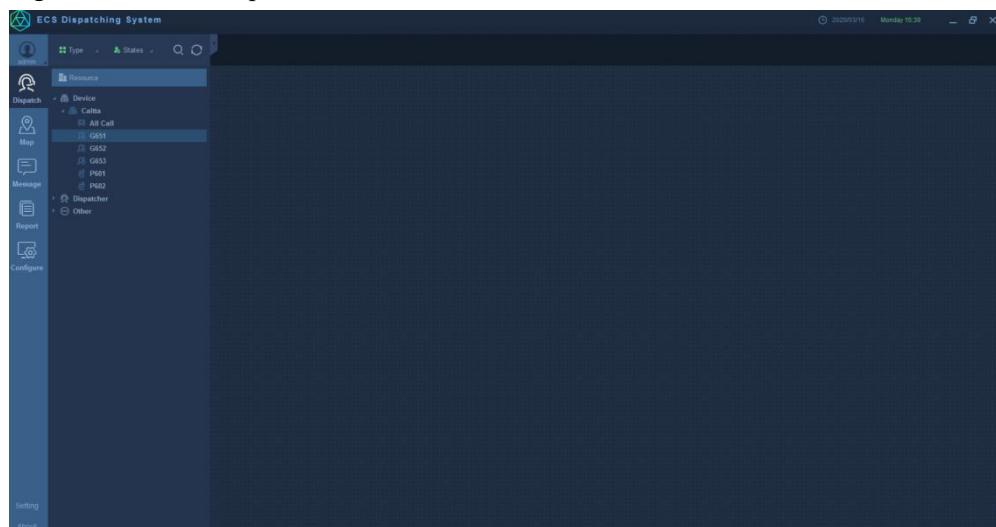

#### 4.2. Add to Dispatch Area

You can add task groups such as dispatching terminals to your dispatch area, which will lead to quick management and dispatch.

Take dispatching terminal as an example, the operation is as follows:

**Step 1** Click "Dispatch", and select "Devices" under "Resources" on the left, as shown in the following figure.

Figure 4-4 Add to dispatch area - 1

**Step 2** Right-click the dispatching terminal, select "Add to Dispatch Area" to add the corresponding terminal to the dispatch area.

Figure 4-5 Add to dispatch area - 2

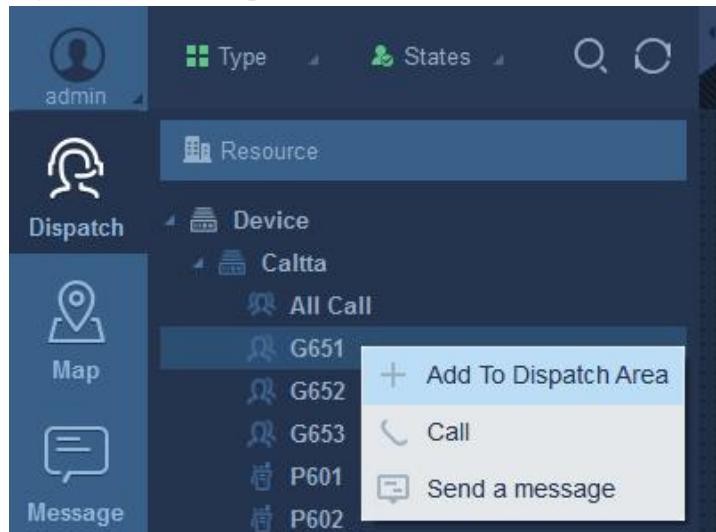

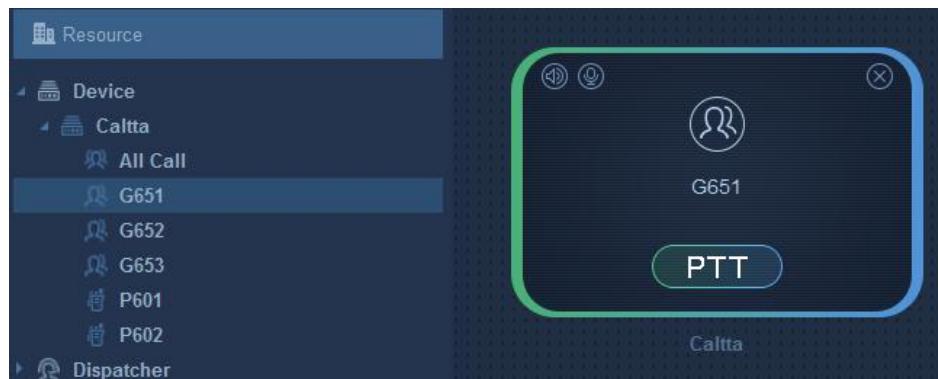

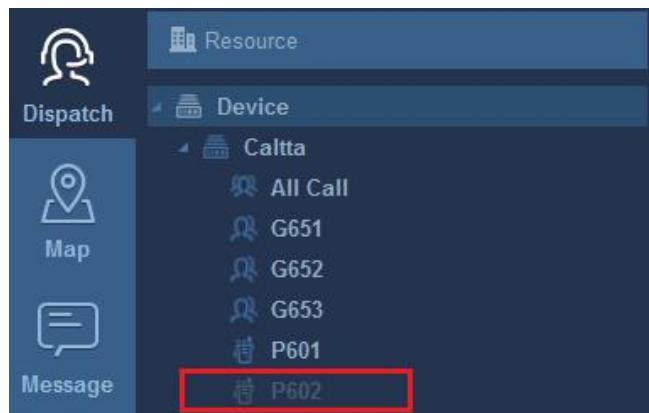

Figure 4-6 Add to dispatch area - 3

If the device icon is in gray (not highlighted), such as , it indicates that the current device should be offline.

Figure 4-7 Device offline

## 4.3. Voice Call

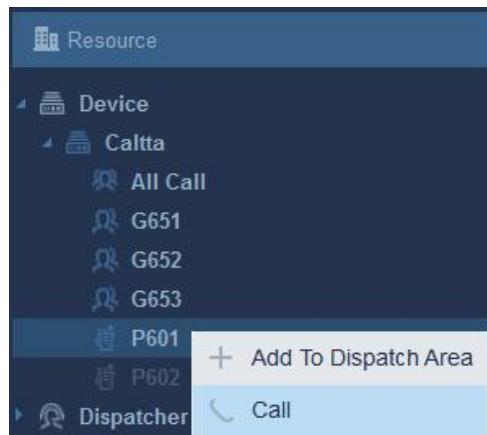

### 4.3.1. Initiate Private Call

You can initiate a private call to an individual radio. The method for initiating a private call is as follows:

- **Method one**

Search or directly select the radio in the "Device" list. Right-click the radio and select "Call" to initiate a private call.

Figure 4-8 Initiate private call via resource list

- **Method two**

In the call panel, click the list to select the radio, and click "PTT" button to initiate a private call.

Figure 4-9 Initiate private call via call panel

#### 4.3.2. Answer Private Call

The system automatically answers the private call, and the call bar prompts that there is a private call in process.

If you need to speak during a private call, there are two scenarios:

1. If you are in non-dispatching interface currently, when the other party releases PTT button and finishes speaking, you can click "PTT" button on the call bar to speak;
2. If you are in dispatching interface currently, when the other party releases PTT button and finishes speaking, you can click "PTT" button in the call panel to speak.

Figure 4-10 Call bar status when receiving private call

Figure 4-11 Call panel status when receiving private call

During the call, when both parties are not pressing "PTT" button, the call panel displays "Call on Hold" status..

Figure 4-12 Call panel status when call is on hold

If both parties have not pressed "PTT" button to speak during the call hold time, the call ends automatically.

Figure 4-13 Call panel status when there is no call

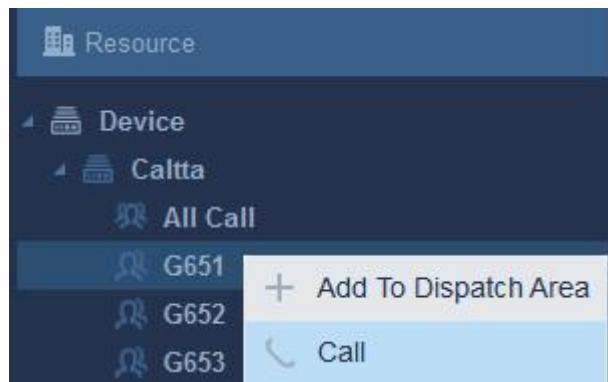

#### 4.3.3. Initiate Group Call

You can initiate a group call to a selected group. The method for initiating a group call is as follows:

- **Method one**

Search or directly select the group in the "Device" list. Right-click the group and select "Call" to initiate a group call.

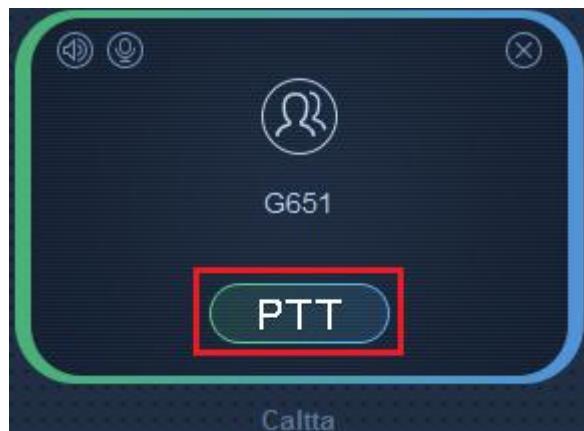

Figure 4-14 Initiate group call via resource list

- **Method two**

In the call panel, click the list to select the group, and click "PTT" button to initiate a group call.

Figure 4-15 Initiate group call via call panel

#### 4.3.4. Answer Group Call

The system automatically answers the group call, and the call bar prompts that there is a group call in process.

If you need to speak during a group call, there are two scenarios:

1. If you are in non-dispatching interface currently, when the other party releases PTT button and finishes speaking, you can click "PTT" button on the call bar to speak;
2. If you are in dispatching interface currently, when the other party releases PTT button and finishes speaking, you can click "PTT" button in the call panel to speak.

Call bar status when answering call:

Figure 4-16 Call bar status when receiving group call

Call panel status when answering call:

Figure 4-17 Call panel status when receiving group call

During the call, when both parties are not pressing "PTT" button, the call panel displays "Call on Hold" status.

Figure 4-18 Call panel status when call is on hold

If both parties have not pressed "PTT" button to speak during the call hold time, the call ends automatically.

Figure 4-19 Call panel status when there is no call

#### 4.3.5. Initiate All Call

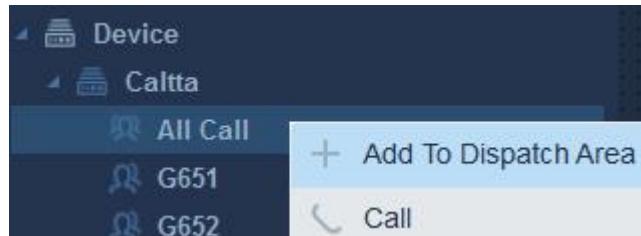

You can initiate all call to all radios under the current base station. The system automatically records the call content. You can query the call history or replay the recording. For details, refer to "Query Call Record".

The method for initiating all call is as follows:

- **Method one**

In the device list, right-click "All Call" under the first-level device and select "Call" to initiate all call

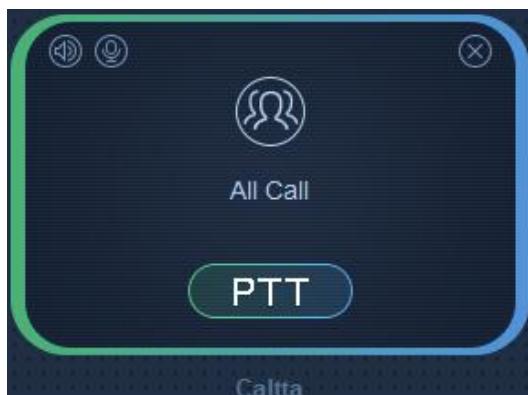

Figure 4-20 Initiate all call via resource list

- **Method two**

In the call panel, click the list to select "All Call", and click "PTT" button to initiate a group call.

Figure 4-21 Initiate all call via call panel

#### 4.3.6. Answer All Call

The system automatically answers the all call, and the call bar prompts that there is all call in process.

If you need to speak during all call, there are two scenarios:

1. If you are in non-dispatching interface currently, when the other party releases PTT button and finishes speaking, you can click "PTT" button on the call bar to speak;
2. If you are in dispatching interface currently, when the other party releases PTT button and finishes speaking, you can click "PTT" button in the call panel to speak.

Figure 4-22 Call bar status when receiving all call

Figure 4-23 Call panel status when receiving all call

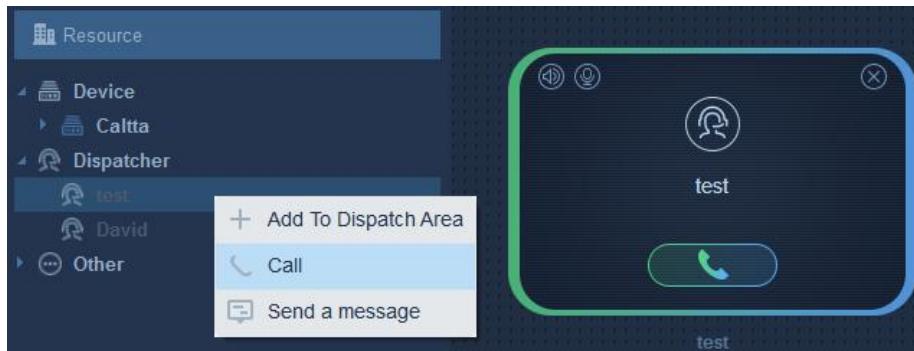

## 4.4. Intercommunication of Dispatchers

One dispatcher can talk to other dispatchers.

The dispatchers' intercommunication method is shown as follows:

In the "Resource" -> "Dispatcher" list, right-click the dispatcher and select "Call" to initiate a call.

Figure 4-24 Intercommunication of dispatchers

## 4.5. Receive Emergency Call

In case of emergency, the radio user can use the radio to initiate an emergency call. After receiving the emergency call, the call panel will turn red to give warning.

The following figure shows an emergency call is received:

Figure 4-25 Receive emergency call

## 5. Map

The "Map" module provides you with end-user positioning, real-time location, and other services. You can also drag, zoom in, and zoom out the map to assist visual dispatch.

## 5.1. Interface Introduction

The main interface of "Map" is composed of map and map toolbar. You can view radio's positioning data and other information on the map.

The "Map" interface and interface elements are shown as follows.

Figure 5-1 Map management interface

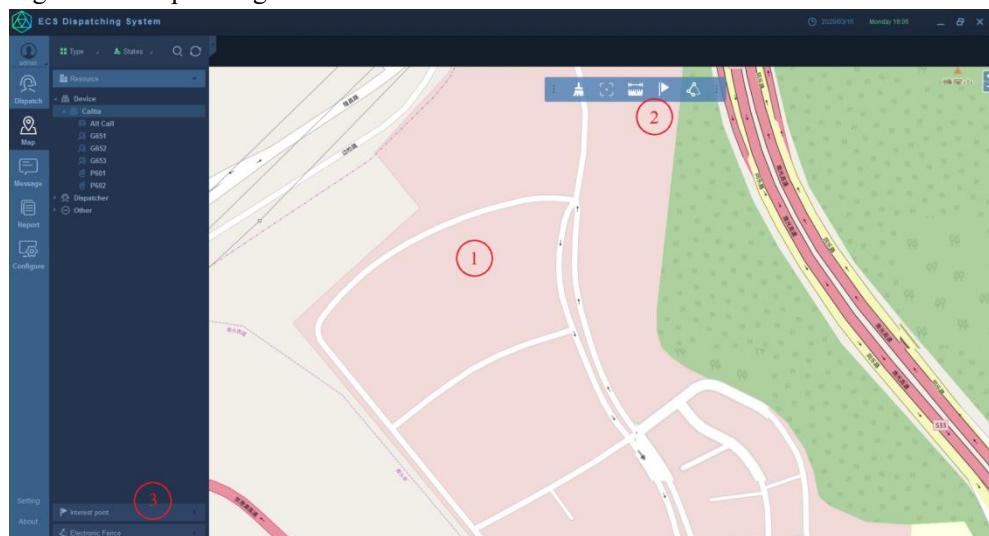

Table 5-1 Map interface explanation

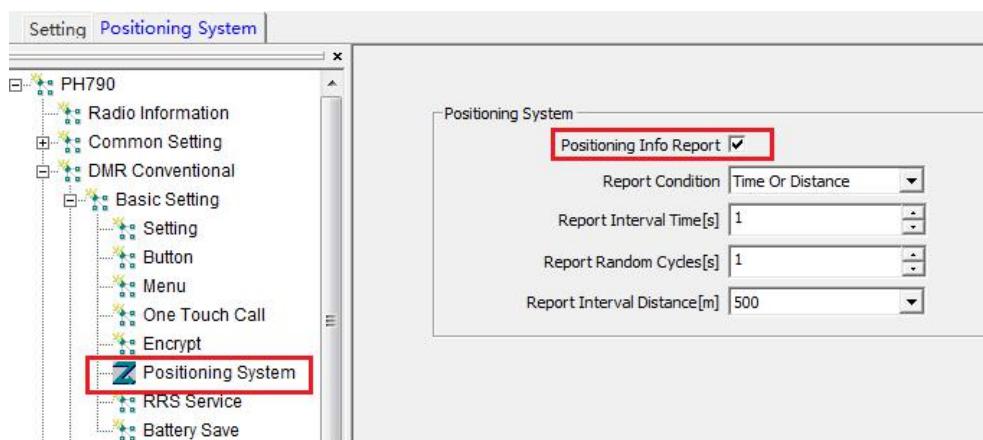

No.	Name	No.	Name
1	Map	3	Interest point & Geo-fencing
2	Map toolbar		

## 5.2. Positioning Radio

You can locate the radio, and the location information of the radio is displayed on the map after successful positioning. You can right-click on the radio icon and perform corresponding operations to achieve visual dispatch.

The radio must have a positioning module and the positioning function is turned on before it can be positioned.

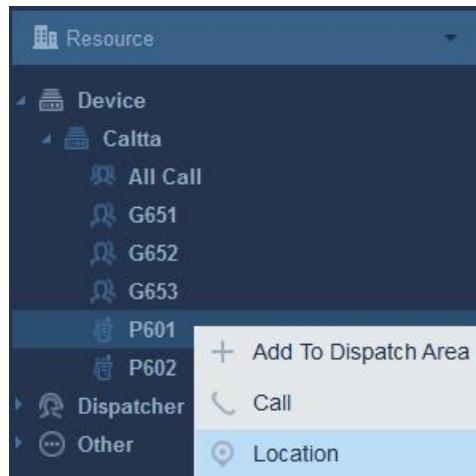

Figure 5-2 Radio positioning system setting

### 5.2.1. Single time Location

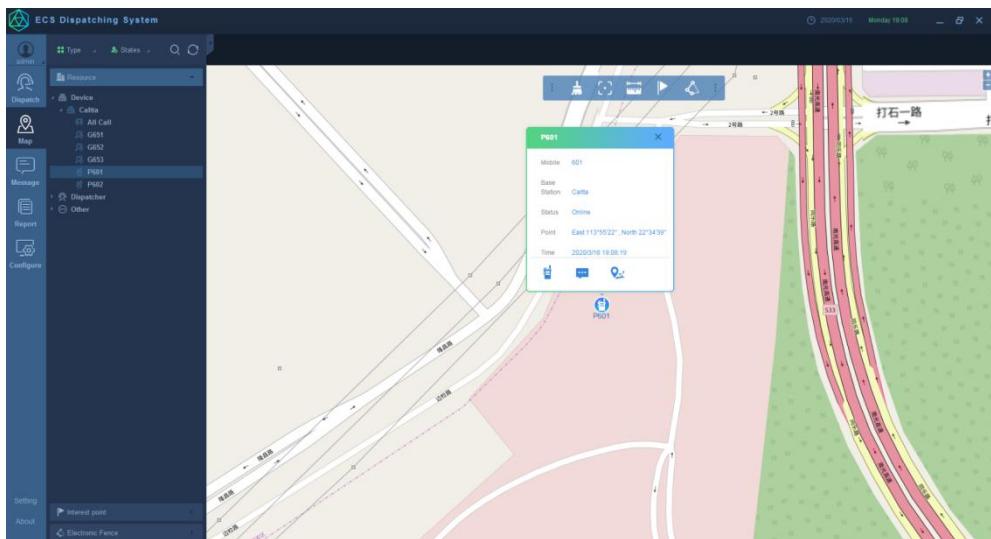

Open "Device List", right-click the radio, and select "Location".

Figure 5-3 Single time location

The current location of the radio will be displayed on the map. Zoom in the map, the radio information is displayed.

Figure 5-4 Radio information displayed on the map

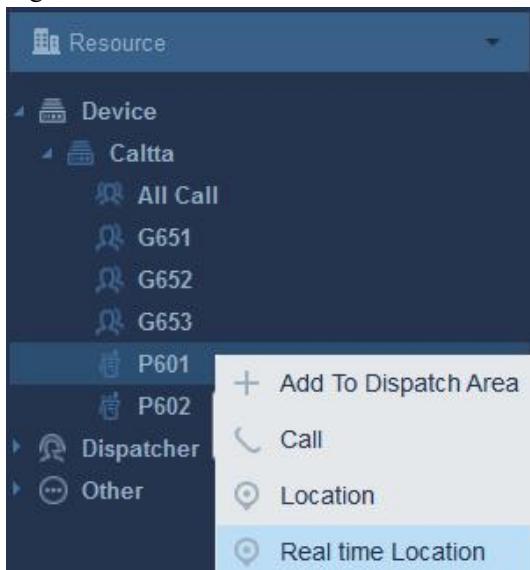

## 5.2.2. Real-time Location

### 5.2.2.1. Turn on Real-time Location

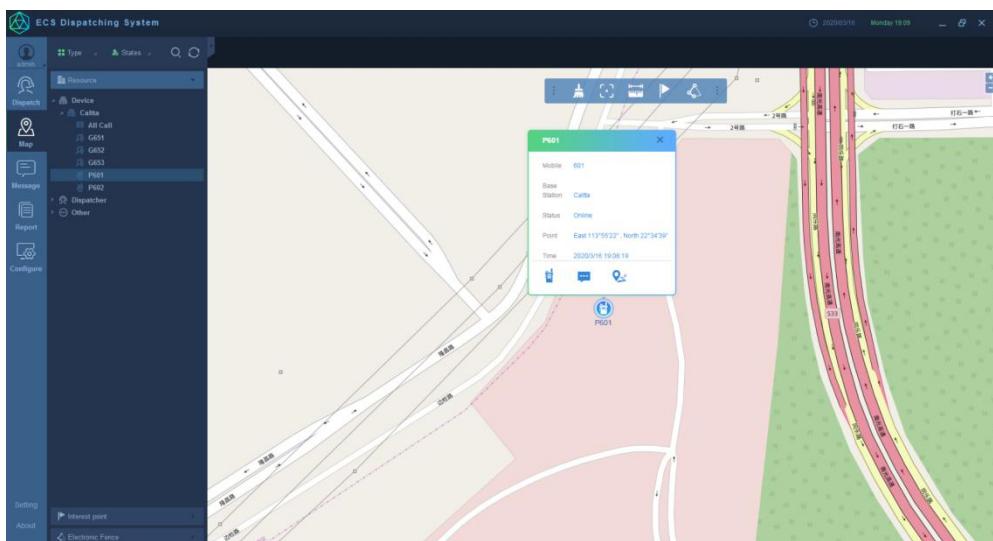

Open "Device List", right-click the radio, and select "Real time Location". Open the device list, right-click the terminal, and select "Cancel Location" to cancel the "Real time Location" of the terminal.

Figure 5-5 Turn on real-time location

The location information of the terminal is periodically refreshed and highlighted on the map.

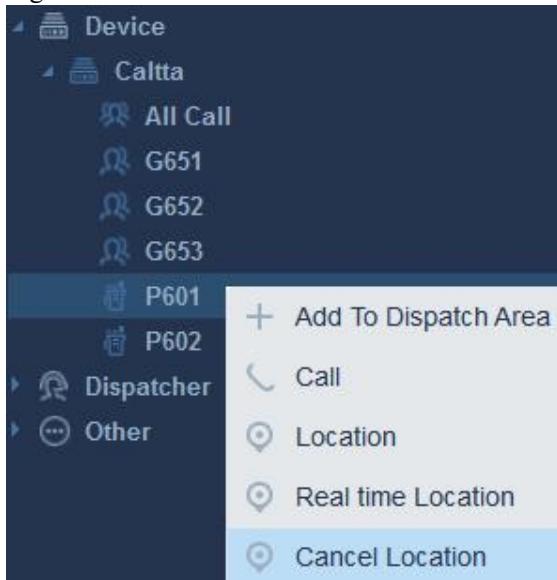

Figure 5-6 Radio information displayed on the map

### 5.2.2.2. Turn off Real-time Location

Open "Device List", right-click the radio, and select "Cancel Location" to cancel the Real-time Location of the radio.

Figure 5-7 Turn off real-time location

## 5.3. Use Map Toolbar

You can use the map toolbar to assist you to perform visual dispatch operation.

Figure 5-8 Map toolbar

Click to move the map toolbar.

Table 5-2 Map toolbar explanation

Button	Explanation	Remarks
	Map ranging	Measure distance on the map
	Removal tool	Clear all markers on the map
	Focus on target	Center display the location point on the map
	Geo-fencing	Add Geo-fencing
	Interest point	Add Interest point

## 5.4. Geo-fencing

The Geo-fencing means that when the radio leaves the designated fence region, a fencing alarm will be triggered.

### 5.4.1. Add Geo-fencing Task

Step 1 Click "Geo-fencing" on the map toolbar to open the e-fence setting interface.

Figure 5-9 "Geo-fencing" on the map toolbar

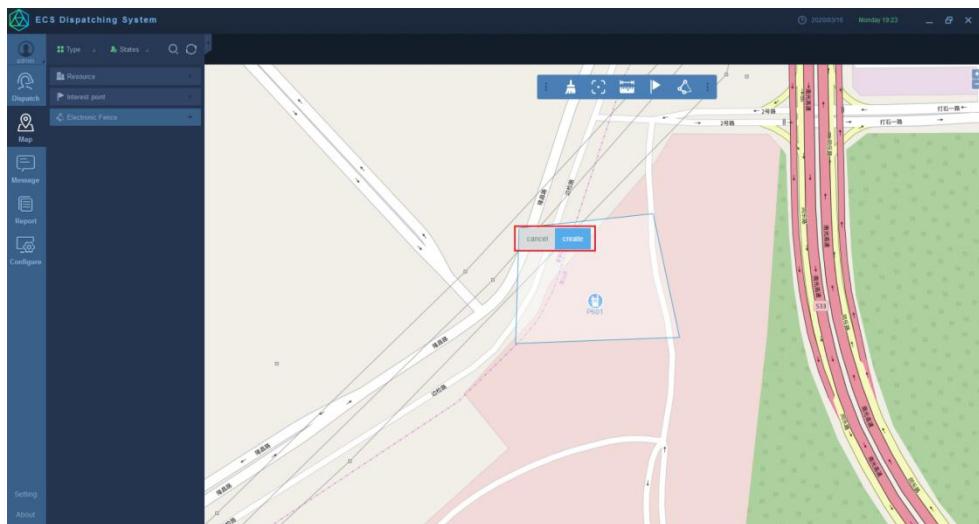

Step 2 Draw the designated region on the map.

Figure 5-10 Draw the designated region for Geo-fencing

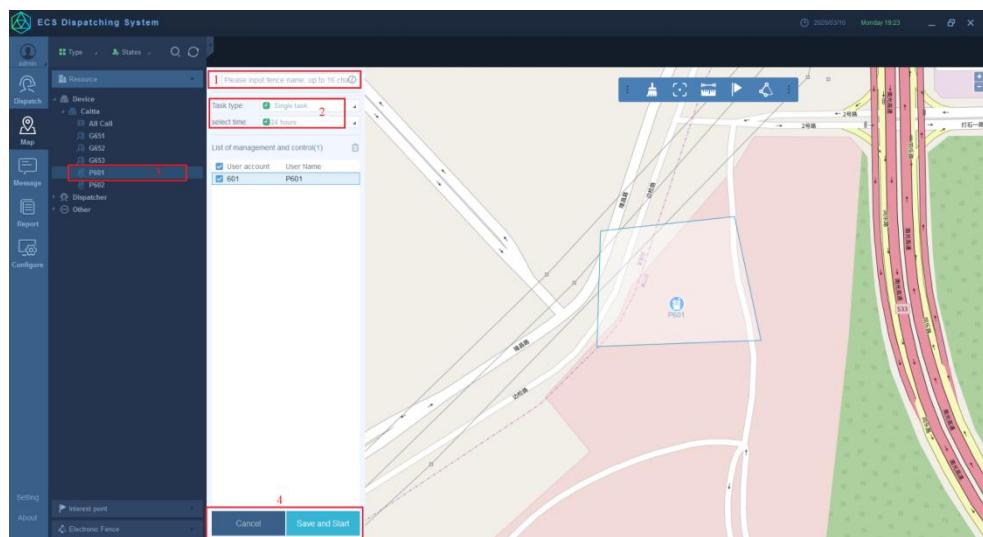

Step 3 After drawing the fence region, double-click the mouse to finish, and click "Create".

Figure 5-11 Create fence region

**Step 4** Enter the "Fence name", "Task type", "Select Time", and "List of management and control", and click "Save and Start".

Figure 5-12 Create fence task

1: Enter the name of the Geo-fencing; 2: Select the "Task Type" and "Select Time"; 3: Double-click the radio number to be controlled ; 4: Click "Save and Start".

#### 5.4.2. Geo-fencing Alarm

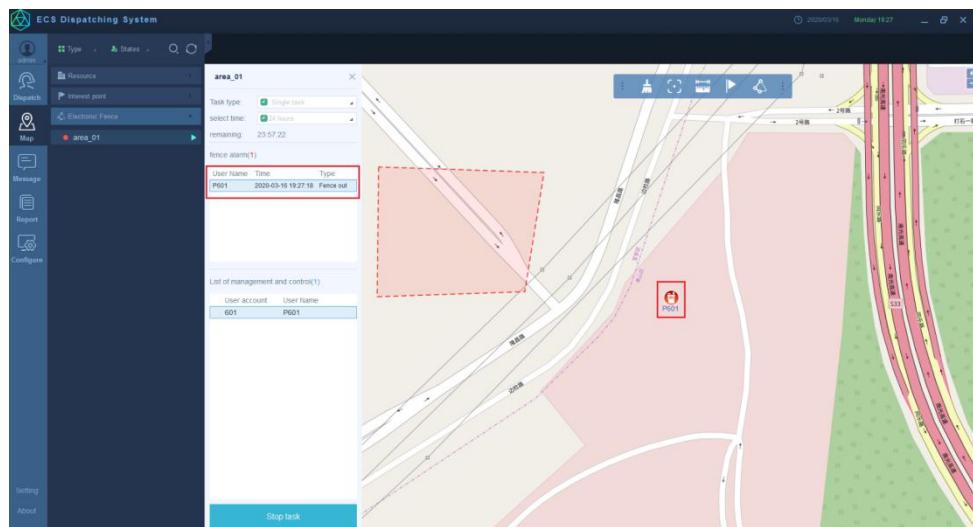

After the task starts, when the controlled radio exceeds the fenced region, a corresponding Geo-fencing alarm will be raised, and the radio outside the fence region will be displayed in red.

Figure 5-13 Geo-fencing alarm

Double-click on the corresponding Geo-fencing to view details.

Figure 5-14 Geo-fencing alarm detail

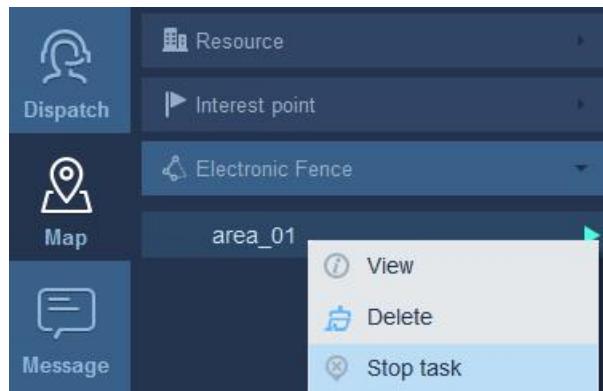

### 5.4.3. Stop Geo-fencing Task

After stopping the task, you can suspend the control of the current user.

- **Method one**

Right-click on the existing Geo-fencing and select "Stop Task".

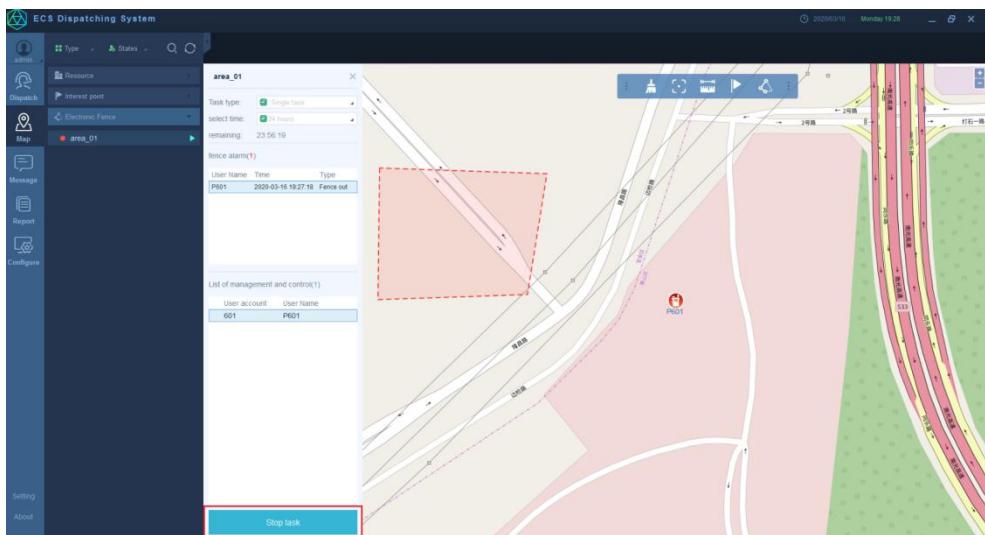

Figure 5-15 Stop geo-fencing task - 1

- **Method two**

Double-click on the existing Geo-fencing to view specific information of the fence, and select "Stop Task".

Figure 5-16 Stop geo-fencing task - 2

After the task stops, the menu changes to "Start Task", you can click on "Start Task" button again to restart the task:

Figure 5-17 Resource list menu changes after geo-fencing stops

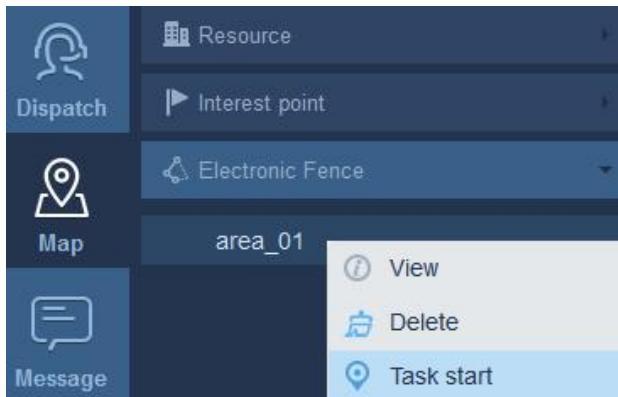

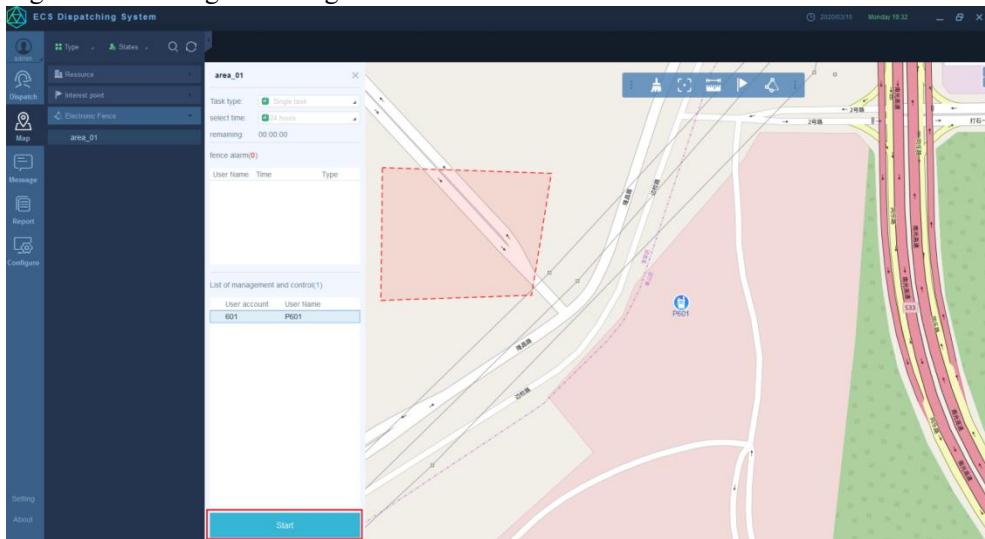

Figure 5-18 Start geo-fencing task

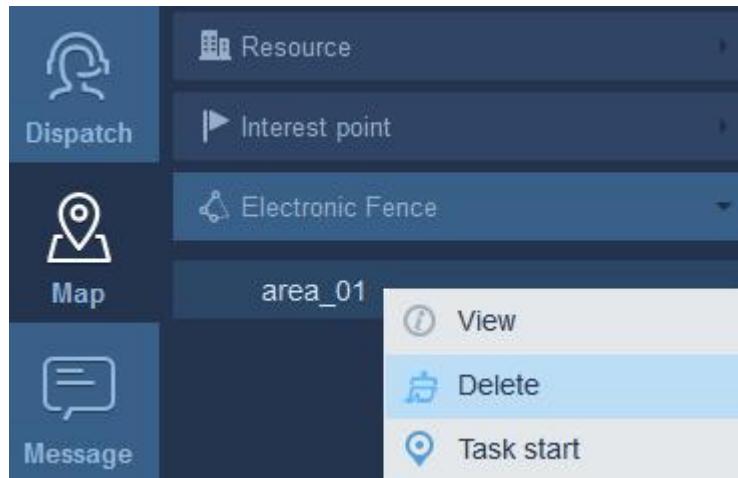

#### 5.4.4. Delete Geo-fencing Task

Find the Geo-fencing you want to delete in the resource list, right-click and select "Delete".

The Geo-fencing is deleted.

Figure 5-19 Delete geo-fencing task

### 5.5. Interest Point

The main purpose of "Interest Point" is to mark the place of interest. Click on the Interest point to quickly locate the marked place.

#### 5.5.1. Add Interest Point

Step 1 Click on the map toolbar .

Figure 5-20 "Interest point" on the map toolbar

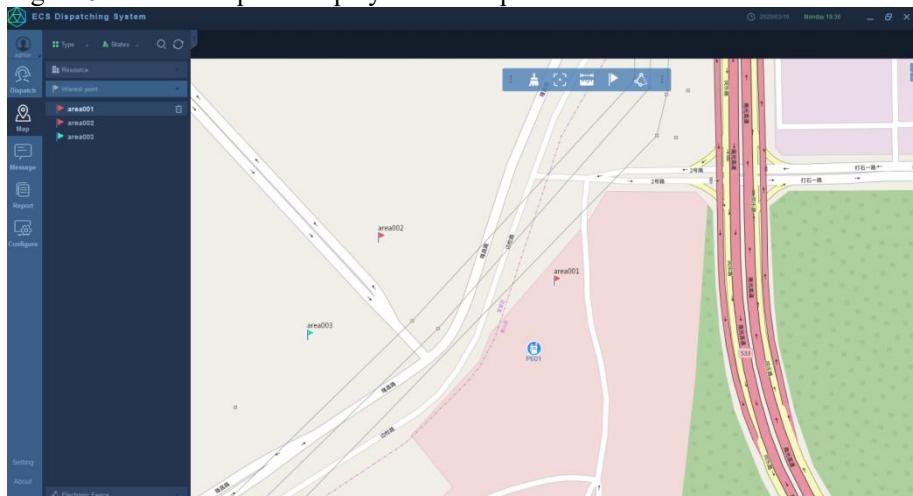

Step 2 Find the location needed to be marked on the map, click it, and a dialog box will pop up, enter the "Name", select the "Icon", fill in "Info", and click "Determine".

Figure 5-21 Add interest point

Double-click an interest point under "Interest point" on the left resource list to center it.

Figure 5-22 Interest point display on the map

### 5.5.2. Edit Interest Point

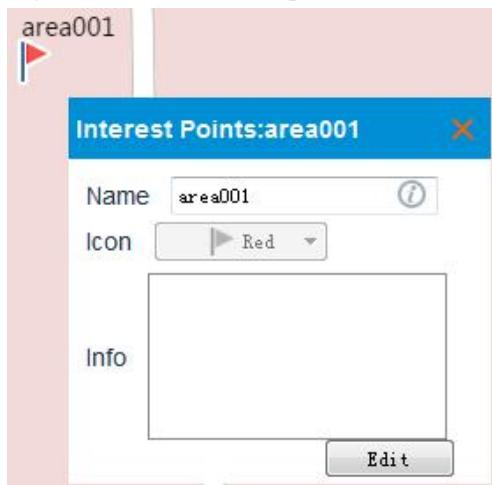

Find "Interest point" on the left resource list, double-click the point you want to modify, and click "Edit" to modify the "Name" and "Description" of the Interest point.

Figure 5-23 Edit interest point - 1

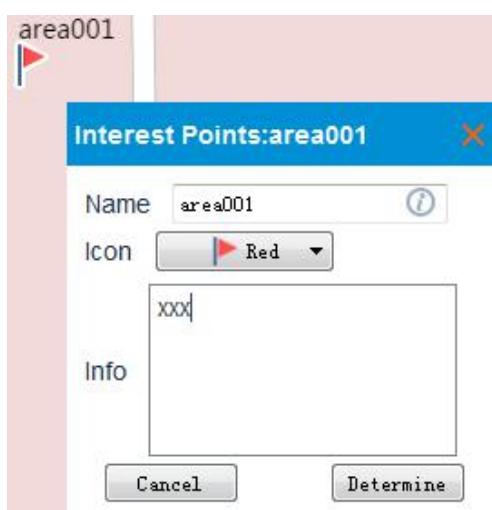

After double-clicking, the following page pops up:

Figure 5-24 Edit interest point - 2

Click "Edit" to enter the editable state, you can edit the "Name", "Icon", "Info".

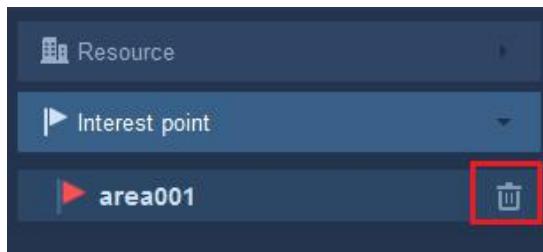

Figure 5-25 Edit interest point - 3

### 5.5.3. Delete Interest Point

Find the entry you want to delete under "Interest Point" on the left resource list, click to delete.

Figure 5-26 Delete interest point

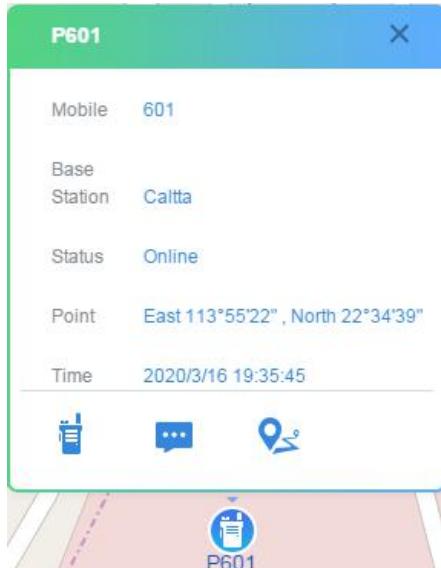

## 5.6. Radio Visual Dispatch

You can make call to the radio, send text message, and view historical track on the map to realize visual dispatch of the radio, to improve your work efficiency.

Left-click the radio on the map and select relevant operation in the toolbar.

Figure 5-27 Radio visual dispatch

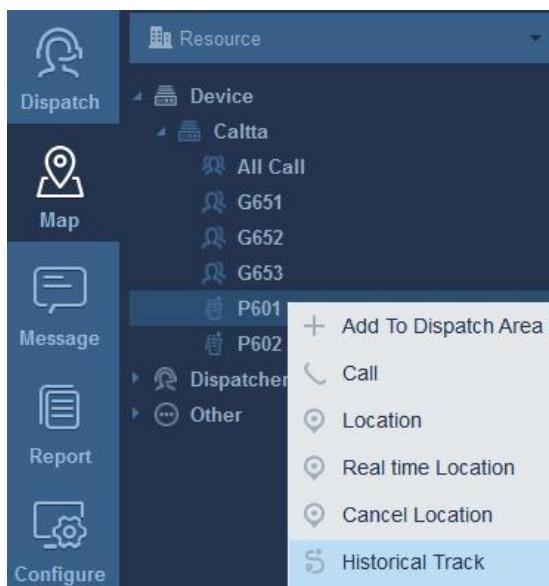

## 5.7. Track Playback

For users who have positioning service, the system will automatically save the user's historical location information. The dispatcher can choose to view the historical track of the user within a certain period of time.

- **Method one**

Search or directly select the radio. Right-click the radio and select "Historical Track".

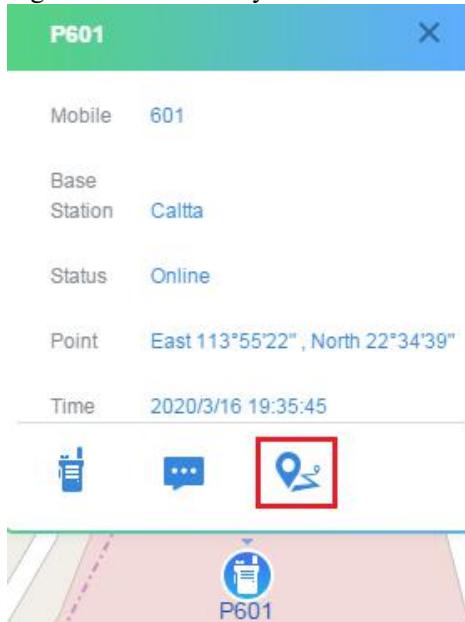

Figure 5-28 Track Playback - method 1

- **Method two**

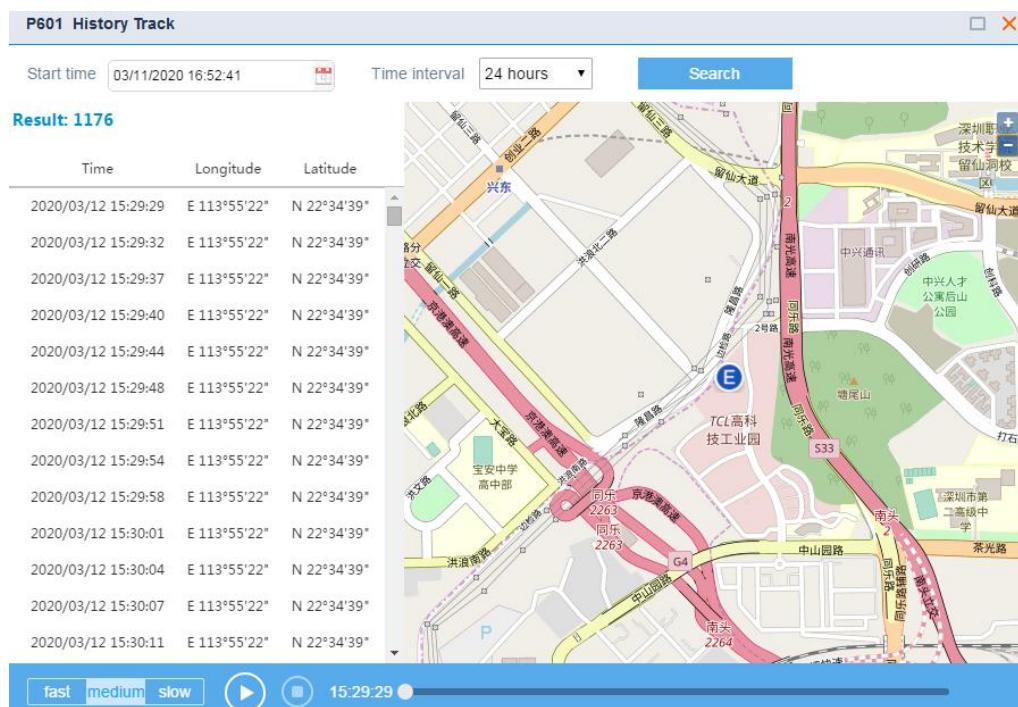

On the map interface, click the terminal that needs to play the track, click  on the pop-up page.

Figure 5-29 Track Playback - method 2

Select the "Start time" and "Time interval" (up to 24 hours), and click "Search". The historical track points is displayed on the left. Click  below to play the historical track.

Figure 5-30 Play historical track

## 6. Message

The "Message" module provides you with services such as sending short message to group, sending short message to radio, receiving short message, etc. The contents of short message are displayed in a list which makes it easy to browse.

### 6.1. Interface Introduction

Figure 6-1 Message management interface

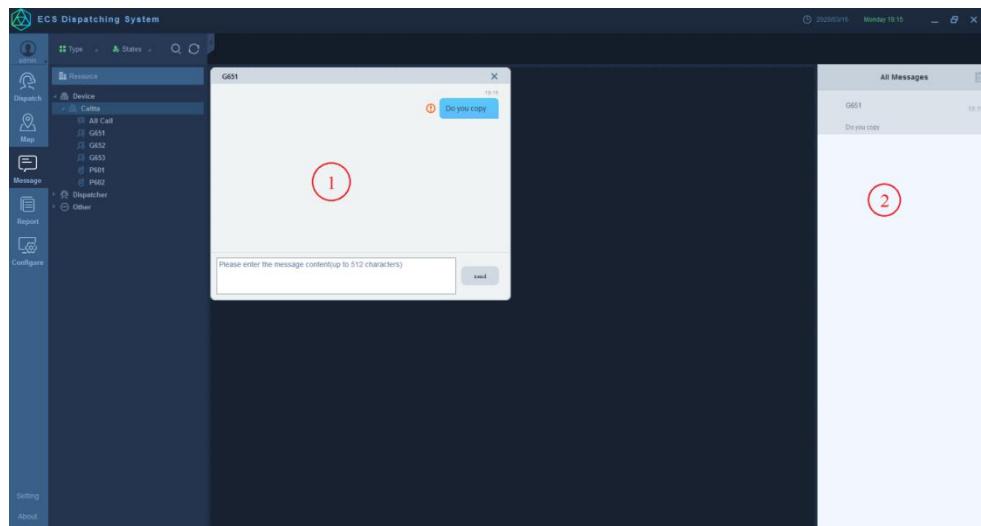

Table 6-1 Message management interface explanation

No.	Name	No.	Name
1	Message dialog box	2	Recent contact list

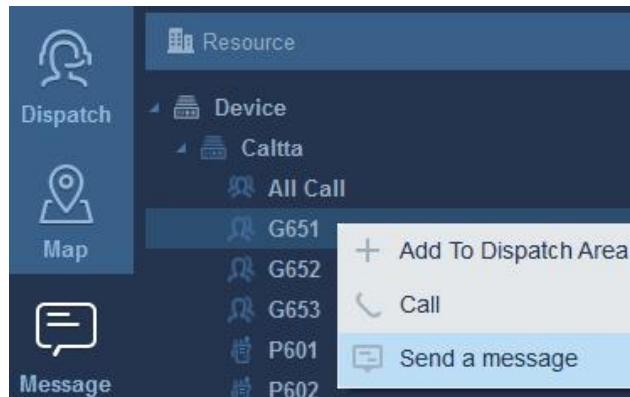

## 6.2. Send Message

You can send a short message to a predefined group or user.

- **Method one**

Search or directly select the group or user, right-click, and select "Send a Message".

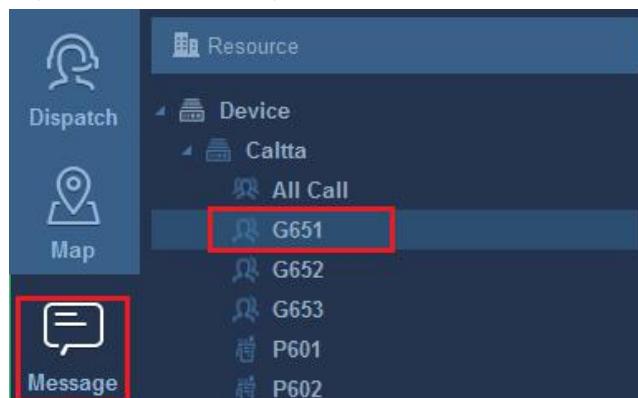

Figure 6-2 Send Message - method 1

- **Method two**

Click "Message" main menu, search or directly select a group or user, and double-click the group or user to send a short message.

Figure 6-3 Send Message - method 2

### 6.3. Receive Message

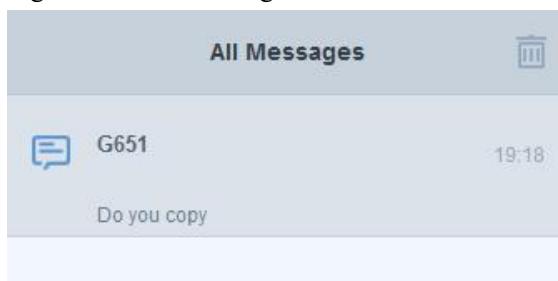

When dispatcher receives a short message, the "Message" main menu will be displayed with a small orange dot to indicate that there is a new short message.

Figure 6-4 Receive new message

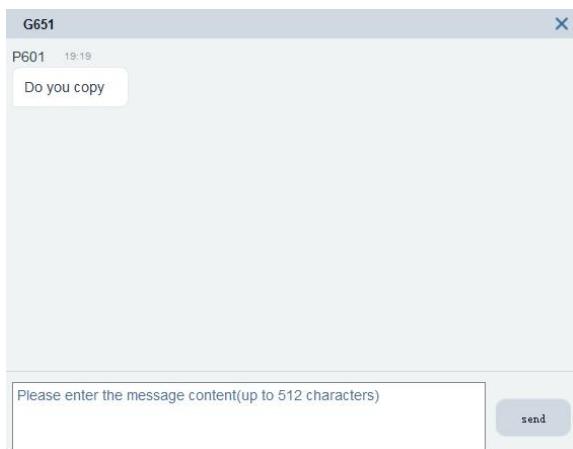

After clicking "Message" main menu, the contact with new short message will be highlighted in the contact list.

Figure 6-5 New message in contact list

Click on a contact, it will display the details of the short message.

Figure 6-6 Message dialog box detail

## 7. Report

The dispatching system provides you with 4 kind of reports, each one supports export function, which can export data to an Excel file:

- Call history report
- Online record report
- Short message report
- Geo-fencing report

### 7.1. Interface Introduction

You can query different records at the main interface of "Report".

The "Report" interface and interface elements are shown as follows.

Figure 7-1 Report management interface

No	Call Type	Caller Name(ID)	Callee Name(ID)	Base Station	Start Time	Call Duration	Download	Play
1	All Call	P602(602)	All Call	Caltta(4)	2020-03-16 18:15:39	00:00:13		
2	All Call	P602(602)	All Call	Caltta(4)	2020-03-16 18:14:54	00:00:23		
3	Group Call	P602(602)	G653(653)	Caltta(4)	2020-03-16 18:14:39	00:00:10		
4	All Call	admin(16775904)	All Call	Caltta(4)	2020-03-16 18:14:29	00:00:06		
5	Group Call	P601(601)	G651(651)	Caltta(4)	2020-03-16 15:55:22	00:00:34		
6	Individual Call	P601(601)	admin(16775904)	Caltta(4)	2020-03-16 15:52:55	00:00:21		
7	Individual Call	P601(601)	admin(16775904)	Caltta(4)	2020-03-16 15:52:21	00:00:09		
8	Group Call	P601(601)	G651(651)	Caltta(4)	2020-03-16 15:36:10	00:00:16		

Table 7-1 Report management interface explanation

No.	Name	No.	Name
1	Main menu	3	Query result list
2	Query condition input		

## 7.2. Query Call Record

The system supports querying call history record and downloading voice recording playback.

After a call finishes, you can first query the call record, then download and replay the voice recording.

**Step 1** Click "Report" in the main menu, select "Call Record", enter query parameters (support fuzzy query), "Call Time" is mandatory, and other parameters are optional as required.

Figure 7-2 Query call record

**Step 2** Click "Search". The query is successful, and the corresponding records are displayed in the list below.

Figure 7-3 Call record display

No	Call Type	Caller Name(ID)	Callee Name(ID)	Base Station	Start Time	Call Duration	Download	Play
1	All Call	P602(602)	All Call	Caltta(4)	2020-03-16 18:15:39	00:00:13		
2	All Call	P602(602)	All Call	Caltta(4)	2020-03-16 18:14:54	00:00:23		
3	Group Call	P602(602)	G653(653)	Caltta(4)	2020-03-16 18:14:39	00:00:10		
4	All Call	admin(16775904)	All Call	Caltta(4)	2020-03-16 18:14:29	00:00:06		
5	Group Call	P601(601)	G651(651)	Caltta(4)	2020-03-16 15:55:22	00:00:34		
6	Individual Call	P601(601)	admin(16775904)	Caltta(4)	2020-03-16 15:52:55	00:00:21		
7	Individual Call	P601(601)	admin(16775904)	Caltta(4)	2020-03-16 15:52:21	00:00:09		
8	Group Call	P601(601)	G651(651)	Caltta(4)	2020-03-16 15:36:10	00:00:16		

Total 8 per page 50 | < | < | 1 / 1 | > | >> |

### 7.2.1. Voice Recording Download / Replay

After the call history query is successful, click to download voice recording, and click

to replay voice recording.

Figure 7-4 Voice recording download / replay

No.	Call Type	Caller Name(ID)	Callee Name(ID)	Base Station	Start Time	Call Duration	Download	Play
1	All Call	P602(602)	All Call	Caltta(4)	2020-03-16 18:15:39	00:00:13		
2	All Call	P602(602)	All Call	Caltta(4)	2020-03-16 18:14:54	00:00:23		

Every call recording file can be downloaded to the client locally, and the recording file can be replayed.

The recording file path is the "audioHistory" folder in the client's root directory, such as "C:\Program Files\PD200\audioHistory".

### 7.3. Query Online / Offline Record

You can query the online and offline records of devices such as radios, dispatchers, and base stations based on keywords such as "Device Type", "Device ID", "Online/Offline State", and "Search Time".

**Step 1** Click "Report" in the main menu.

**Step 2** Select "Online/Offline Record", enter query parameters.

Figure 7-5 Query online / offline record

**Step 3** Click "Search". The query is successful, and the corresponding records are displayed in the list below.

Figure 7-6 Online / offline record display

No.	Device Type	Device Name(ID)	Home Base Station	Online/Offline State	Time
1	Dispatcher	admin(16775904)	--	Online	2020-03-16 19:48:37
2	Base Station	Caltta(4)	--	Online	2020-03-16 19:48:31
3	Dispatcher	admin(16775904)	--	Offline	2020-03-16 19:47:05
4	Base Station	Caltta(4)	--	Offline	2020-03-16 19:47:04

6	Terminal	P602(602)	Caltta(4)	Offline	2020-03-16 19:47:04
7	Terminal	P601(601)	Caltta(4)	Online	2020-03-16 19:46:02
8	Terminal	P602(602)	Caltta(4)	Online	2020-03-16 19:46:00
9	Terminal	P601(601)	Caltta(4)	Offline	2020-03-16 19:45:53
10	Terminal	P602(602)	Caltta(4)	Offline	2020-03-16 19:45:53
11	Dispatcher	admin(16775904)	--	Online	2020-03-16 19:42:25
12	Dispatcher	admin(16775904)	--	Offline	2020-03-16 19:42:22
13	Dispatcher	admin(16775904)	--	Offline	2020-03-16 19:35:32
14	Dispatcher	admin(16775904)	--	Online	2020-03-16 19:35:32
15	Dispatcher	admin(16775904)	--	Offline	2020-03-16 19:34:49

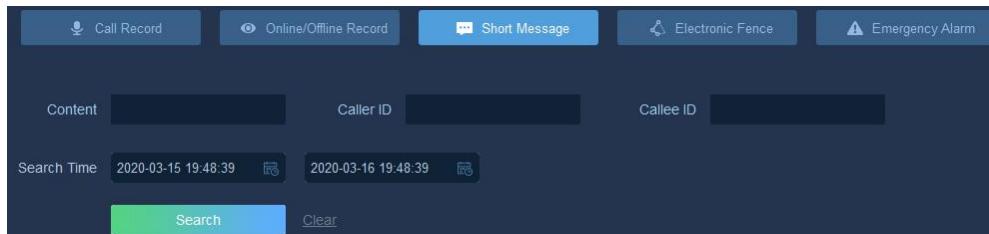

## 7.4. Query Short Message

You can query short message record based on keywords such as "Content", "Caller ID", "Callee ID", and "Search Time".

**Step 1** Click "Report" in the main menu.

**Step 2** Select "Short Message Record", enter query parameters (support fuzzy query), "Search Time" is mandatory, and other parameters are optional as required.

Figure 7-7 Query Short Message

**Step 3** Click "Search". The query is successful, and the corresponding records are displayed in the list below.

Figure 7-8 Short Message record display

No.	Sending Time	Message Content	Caller ID	Callee ID	Send Type
1	2020-03-16 19:19:57	Do you copy	601	651	Group
2	2020-03-16 19:19:26	Do you copy	16775904	651	Group
3	2020-03-16 19:18:27	Do you copy	601	651	Group
4	2020-03-16 19:15:39	Do you copy	16775904	651	Group

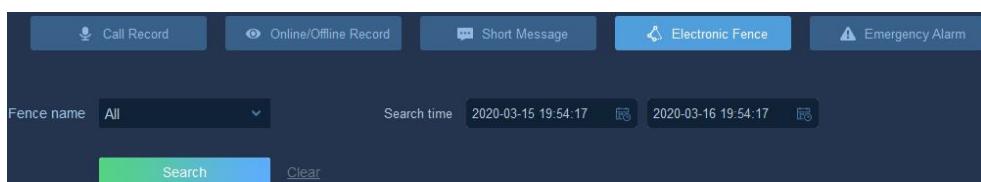

## 7.5. Query Geo-fencing

You can query alarm record of Geo-fencing based on keywords such as "Fence name" and "Search Time".

**Step 1** Click "Report" in the main menu.

**Step 2** Select "Electronic fence", enter query parameters (support fuzzy query), "Search Time" is mandatory, and other parameters are optional as required.

Figure 7-9 Query geo-fencing

**Step 3** Click "Search". The query is successful, and the corresponding records are displayed in the list below.

Figure 7-10 Geo-fencing record display

No.	Fence name	Terminal name	Time of going out the fence	Time of entering the fence
1	area_01	P601		2020-03-16 19:53:12
